Servicenow

IT & Laptop Management System (ServiceNow)

- End-to-end scenario with forms, tables, relations, scripts, and attachments.

Scenario

- A company manages employee laptops, requests, and IT support cases.

Tables Overview

- Employee
- Laptop
- Request
- Incident

Employee Table

- Fields:
- - Name
- - Email
- - Department
- - VIP (Boolean)

Laptop Table

- Fields:
- - Asset Tag
- - Model
- - Assigned To (Reference Employee)
- - Status

Request Table

- Fields:
- - Request ID
- - Employee (Reference)
- - Laptop (Reference)
- - Request Type
- - Status
- - Attachment

Incident Table

- Fields:
- - Incident ID
- - Employee
- - Laptop
- - Description
- - Status
- - Attachment

Relationships

- Employee → Laptops
- Employee → Requests
- Employee → Incidents
- Laptop → Incidents

Form Example: Request Form

- Employee
- Laptop
- Request Type
- Status
- Attachment

Client Script Requirement

- If Employee is VIP → Auto-priority = High

Server Script Requirement

- Check VIP using GlideRecord (Script Include)

Business Rule

- When Incident Closed → Update Laptop Status to Available

Attachment Usage

- Upload screenshots or issue proof

Workflow

- 1. Employee requests laptop
- 2. Assign laptop
- 3. Create incident
- 4. Resolve issue
- 5. Close incident

Questions

- 1. Create all tables with relations
- 2. Build forms
- 3. Add client script
- 4. Add server script
- 5. Add business rule
- 6. Use attachments

Student Practice

Restaurant Management System (ServiceNow)

- End-to-end example including forms, tables, relations, scripts, and attachments.

Scenario

- A restaurant wants to manage Orders, Customers, and Complaints efficiently.

Tables Overview

- Customer
- Order
- Complaint

Customer Table

- Fields:
- - Name
- - Phone
- - Email
- - VIP (Boolean)

Order Table

- Fields:
- - Order Number
- - Customer (Reference)
- - Order Type
- - Status
- - Total Price
- - Attachment

Complaint Table

- Fields:
- - Complaint ID
- - Customer (Reference)
- - Order (Reference)
- - Description
- - Status
- - Attachment

Relationships

- Customer → Orders (One to Many)
- Customer → Complaints (One to Many)
- Order → Complaint

Form Example: Order Form

- Includes:
- Customer
- Order Type
- Status
- Total Price
- Attachment

Client Script Use Case

- If Customer is VIP → Apply 10% discount automatically.

Server Script (Script Include)

- Checks if customer is VIP using GlideRecord.

Business Rule

- When Complaint is Closed → Update Order Status to Done.

Attachment Usage

- Customers upload images for complaints (food, receipt).

Workflow

- 1. Create Order
- 2. Apply VIP discount
- 3. Create Complaint
- 4. Attach files
- 5. Resolve Complaint

Extra Enhancements

- UI Policy
- Validation
- Notifications
- Flow Designer Automation

By Widget

- 🧩 **Practice Example: “Incident Priority Filter + Update State”**
- 🎯 **Goal**
- Create a widget that:
- Selects **Incident Priority**
- Loads **active incidents**
- Select an incident
- **Update its State** (e.g., In Progress / Closed)

By Widget

- 🧩 **Example 1: “Change Request Filter + Show Risk & Approval”**
- 🎯 **Goal**
- Select **Change Type**
- Load **active Change Requests**
- Select one
- Show:
  - Risk
  - Approval state

By Widget

- 🧩 **Example 2: “Problem Records + Add Work Notes”**
- 🎯 **Goal**
- Load **active Problems**
- Select one
- Add **work note from widget**

Thank you
