servicenow — creating a project — 14/5/2026

notes

① create an app through servicenow studio
- → classic platform
- → App engine.

② add the roles → studio
- → Roles table. (out of the box roles will be added like admin, ITIL)

③ then creating groups of the system → studio (make sure of its scope)
- → group table.

④ Renaming update set or creating it as Banking v1
- → from update set table

(Also make sure of the application scope & updateset)

⑤ creating the tables needed with the required fields using
- → App engine studio
- → table in classic servicenow

(Also maintain reference fields & relations & scope of table & menu of the table

⑥ then catalog builder to build, record producer, widgets, catalog item → catalog builder → record producer table (classic)

~~[illegible]~~ Hints :-

record producer have (question) that matches to table fields.

ex: first name → name, etc.

⑦ create custom service portal
- → classic (service portal.)
- → add URL
- → add home page (custom page)

(After doing portal then add catalogs, widget, pages ... etc)

(Right click, page in designer) → service portal designer.

(portal components can be :-
widgets, catalog (record producer), pages, Icon link, etc.)

(8) create flows for the requirement of the project

- flow designer (modules)
- using scriptings
- classic flow.

.... to be continued.
(From doc.)
