

CMDB CI AND ASSET

HARISH

What is CI

A configuration item is used to track operational and relationship information - basically it's a record in your Configuration Management Database (CMDB)

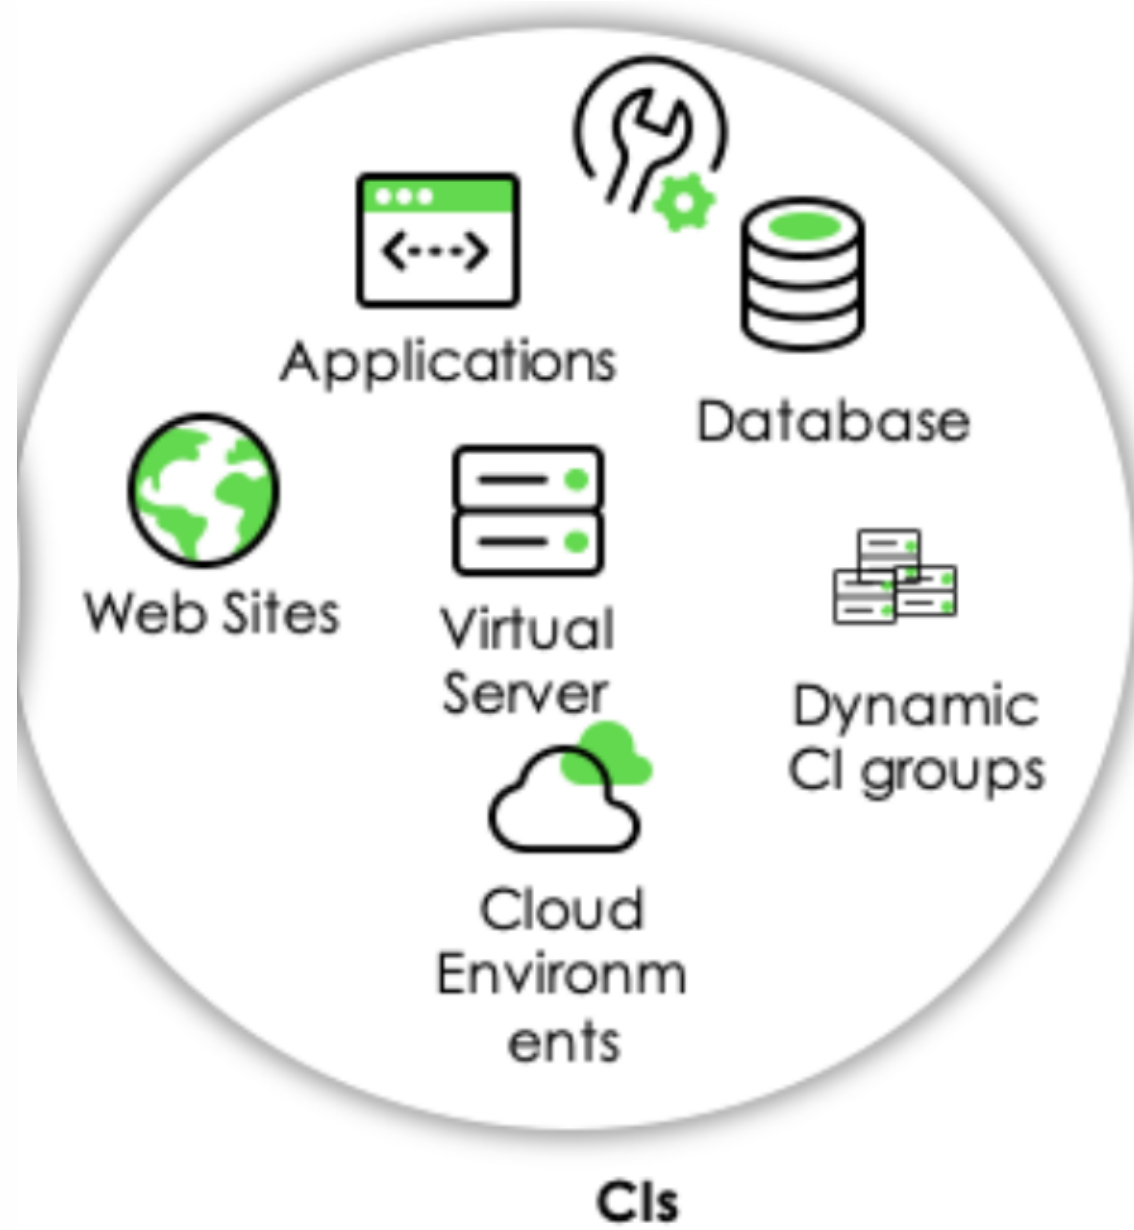

Tip: Use links to go to a different page inside your presentation.

How: Highlight text, click on the link symbol on the toolbar, and select the page in your presentation you want to connect.

Example of Ci

- Virtual server
- Laptop
- switches

How ci can be populated

Can be upload manually

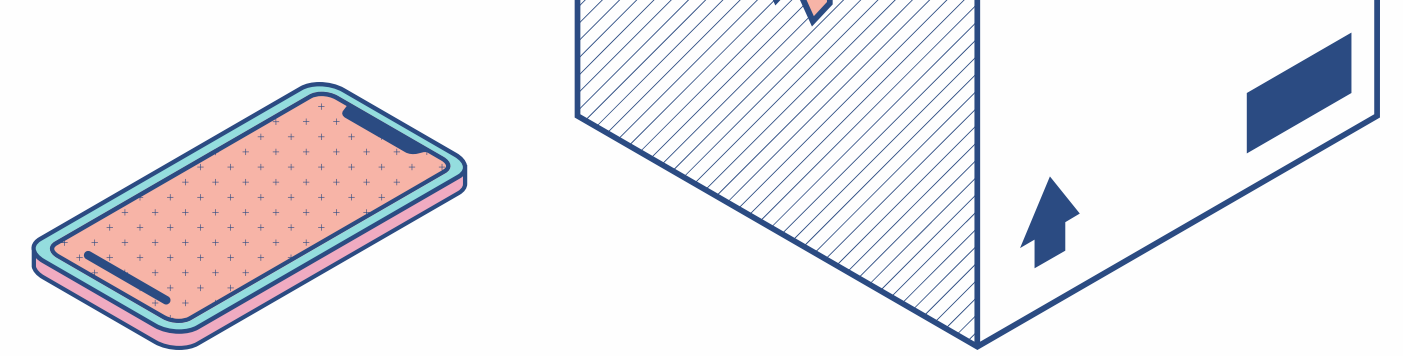

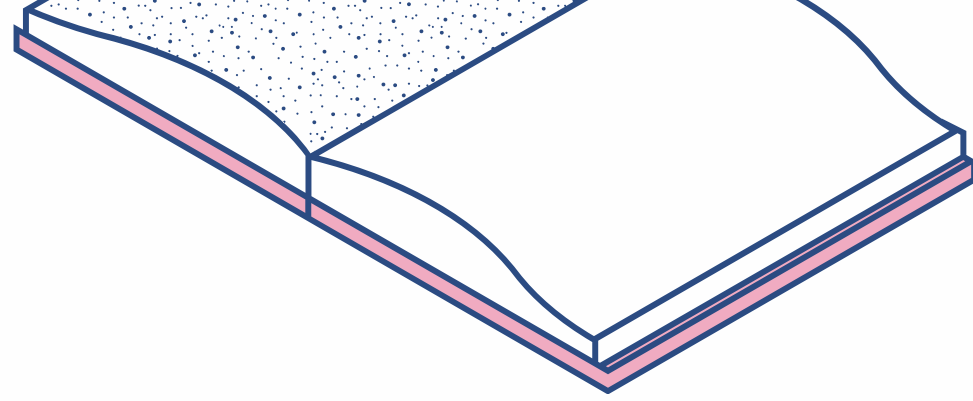

Can be discovered by discovery

Can be created manually by CMDB Manager

What is Asset

An asset is intended to assist with tracking through financial, contractual and leasing lifecycles.

Example of Asset

- Software license
- Physical server
- Laptop
- Keyboard

Assets

Difference Between Ci and Asset

1 ————— A ci can be asset but
asset may not be a ci.

2 ————— A ci can be
configurable but all
asset can not be
configurable

Thank you

HARISH
