

Build a Custom Workspace in ServiceNow with App Engine Studio

If you're building apps on the Now Platform, a dedicated workspace can give your users a clean, role-based UI. Here's a quick guide

Open App Engine Studio

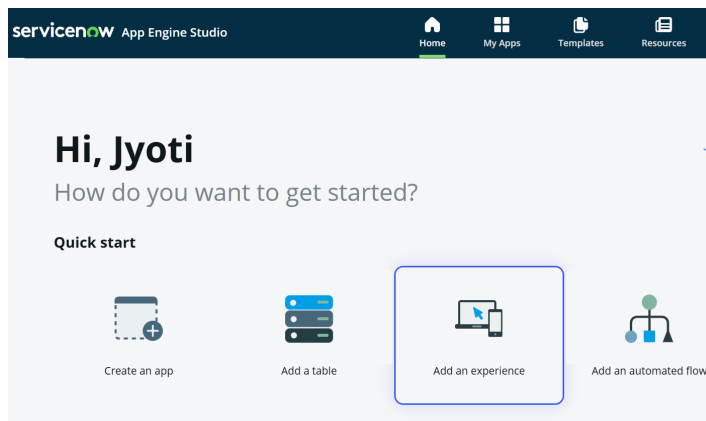

- Go to All → App Engine Studio.

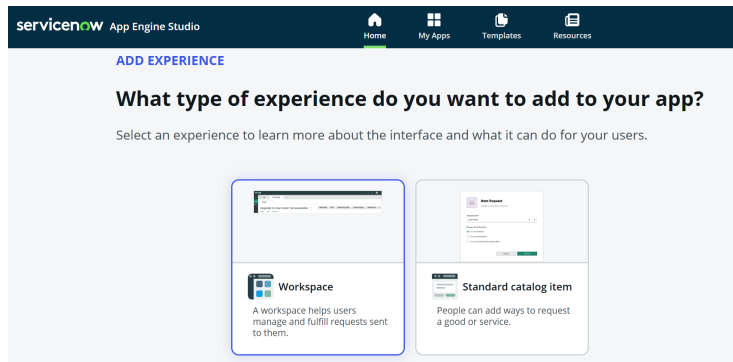

- Open your existing app (or spin up a new scoped app).

Add a Workspace Experience

- Inside your app, click **+** Add → Experience → Workspace.

- Set a clear name, icon, and description (keep your namespace tidy).

Configure Pages & Data

- Pick a landing page (Home or Dashboard).
- Add lists, record pages, and data visualizations relevant to your tables.
- Map roles to your workspace so only the right personas see it.

ADD EXPERIENCE

Great. Let's add some data.

Select the data tables you want to work on in this experience.

Refine in UI Builder

- Drag & drop components, tweak layouts, and wire up data sources.
- Great spot for advanced filters and declarative actions.
