Now Assist

Generative AI Controller

Understanding the Differences

Overview

Now Assist and Generative AI Controller are both AI-powered tools in ServiceNow, but they serve different purposes and have distinct features.

Now Assist: Purpose

Now Assist is designed for enhancing user interactions and automating responses in various ServiceNow applications. It's also a suite of products and tools.

Think of a partner that assists you in various tasks.

For Creator

Generative AI Controller: Purpose

Generative AI Controller is a platform for building and managing custom AI applications within ServiceNow. It's a part of Now Assist, although more configurable. It serves as the foundation for ServiceNow's generative AI products.

Think of a tool that you can use to build something more complex and integrate with external LLMs.

Now Assist: Key Features

Summarization of:

- Case
- Incidents
- Chat
- Work order task closure

Generation of:

- Code
- Flow
- Playbook
- KB
- Resolution Notes

And

- Now Assist in AI Search
- Now Assist in Virtual Agent

Generative AI Controller: Key Features

Integration with various AI models and providers

Avoiding the need to integrate via Rest API

Building your own custom capabilities

Room for customization

Example of utilizing Now Assist

After providing information, such as:
Short description, Description, State, Work
notes, Additional comments

Now Assist can then generate resolution
notes for this incident based on the above.

✚ Incident summarized by Now Assist ⓘ

Share to work notes

Issue:

- The USB port on my PC stopped working

Actions taken:

- The customer reached out to IT support
- The agent created a support ticket (INC1234567)
- The agent checked the hardware and confirmed that it was not a hardware issue
- The agent suggested reaching out to the manufacturer for further assistance

Resolution:

- The issue was not resolved by the actions taken by the agent. The resolution will be determined once the customer reaches out to the manufacturer.

Example of utilizing Generative AI Controller

CI names and descriptions are parsed from external source in different formats (e.g., "Server_01", "srv-01", "Server01")

Using Generative AI Controller Actions in a Flow it's possible to convert server names to a standardized format "SRV-XXXXX".

Conclusion

It's a powerful feature that is quite new in the ServiceNow ecosystem. More and more modules are being included in Now Assist, and as the LLMs become more powerful, the Generative AI Controller can be used in an increasing number of use cases.

Take your time and explore the topic, as it's quite fascinating!

Thanks,
Krystian
