
JIRA Integration with ServiceNow using JIRA SPOKE

Note: There might already be articles or documents available for JIRA integration, but I wanted to create a detailed one to help those who are trying to learn or implement it. I faced some errors/issues while following other guides and have simplified the process here. Please feel free to comment if anything is wrong or needs to be corrected.

Prerequisites:

- A JIRA account should be created with an API Key. For more info, please refer the below:

<https://www.atlassian.com/software/jira/guides/getting-started/basics#step-4-create-an-issue>

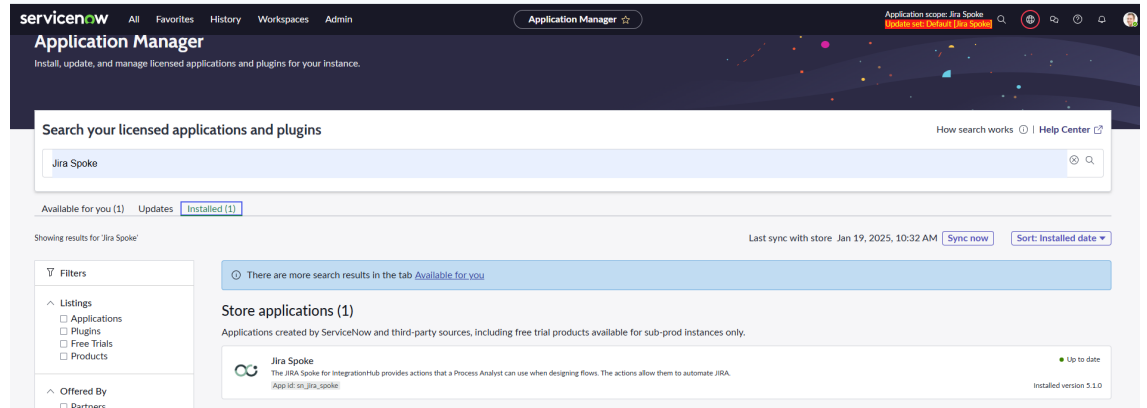

<https://support.atlassian.com/atlassian-account/docs/manage-api-tokens-for-your-atlassian-account/>

Overview:

This is a **unidirectional integration** where **ServiceNow acts as the source** and **JIRA is the receiver**. This means that data flows from ServiceNow to JIRA.

Steps:

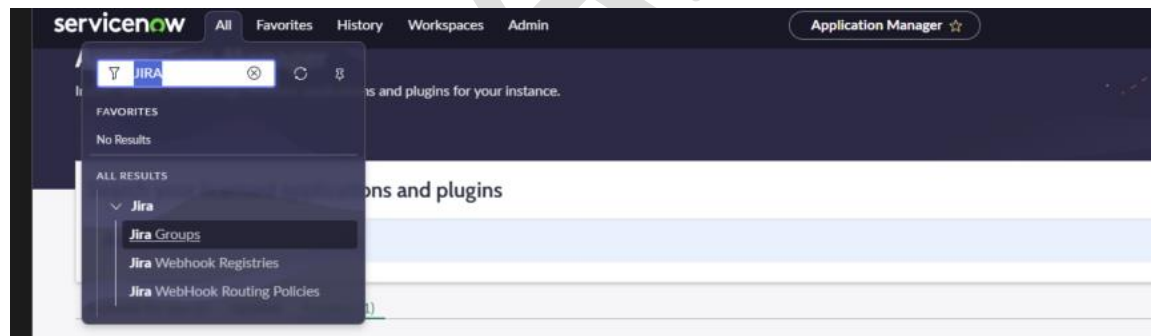

1. **Ensure Integration Hub Plugin is Installed**
2. **Install the JIRA Spoke:**
 - Go to **Plugin** > Click **Find in Store** > Search for **JIRA Spoke** OR
 - Open the JIRA Spoke application from the store.
 - **Note:** Trial apps can only be installed on non-production instances. Purchased apps can be installed on any instance.
3. **To Install the Application:**
 - Log in to the ServiceNow instance where you want to install the app.
 - Navigate to **System Applications** > **All Available Applications** > **All**.
 - Search for the app you want to install.
 - Click on **Install**. Your app will be automatically installed onto your instance.

- **Note:** Some other plugins need to be pre-installed as JIRA Spoke is dependent on them:
 - ServiceNow IntegrationHub Runtime
 - ServiceNow IntegrationHub Action Step - REST
 - ServiceNow IntegrationHub Action Template - Data Stream

4. **Verify JIRA Spoke Installation:**

- Go to **All Applications**, type **JIRA**, and check if the spoke is correctly installed.

5. **Create the Credential Profile:**

- Navigate to **Connections & Credentials > Credentials > New > Basic Auth**

servicenow All Favorites History Workspaces Admin Credentials ☆

< Credentials

What type of Credentials would you like to create?

- API Key Credentials
- Applicative Credentials
- AWS Credentials
- Azure Enterprise Agreement Credentials
- Azure SAS credentials
- Azure Service Principal
- Basic Auth Credentials**
- Certificate Management Credentials
- CIM Credentials
- Cloud Management Credential
- Custom Header API Key Credential
- Docker Credentials
- Docker Repositories List
- Google Cloud Credentials
- JDBC Credentials
- JMS Credentials
- Kafka SSL credentials
- MID Protocol Profile
- OAuth 2.0 Credentials

Credentials and create a new credential profile.

Basic Auth Credentials
JIRA Basic API

Name: JIRA Basic API Order: 100

User name: [redacted]@gmail.com

Password: [redacted]

Active: ☒

A connection alias resolves your connection and credential at runtime. More than one Credential can be active per Connection Alias at a time. If more than one credential is active, they will be used in order.

Credential alias: [Add]

Update Delete

Discovery IP Affinity: MID server Search

Credential Affinities	Credential ID	IP address	IP address decimal	IP address expanded	Domain	Type
No records to display						

- **Note:** You can ignore putting the alias.
6. **Create a Connection Profile:**
- Navigate to **Connections & Credential Aliases > Connections > New > HTTP(s) Connection.**

HTTP(s) Connection
JIRA Connection

Name: JIRA Connection

Credential: JIRA Basic API

Connection alias: sn_jira_spoke_jira

Connection URL: https://[redacted].atlassian.net/

Attributes

api_version: 2

server_type: cloud

Update Delete

7. **Check Connection and Credential Alias:**
- Ensure the connection profile is correctly associated with the alias.

Connection & Credential Aliases
sn_jira_spoke.jira

8. Clear Cache:

- Ensure you clear the cache of your instance after this setup.

9. JIRA Spoke is Ready to Use:

- To troubleshoot HTTPS requests, enable the following via `sys_properties`. If there is none, please create an entry. To view the HTTP logs, go to **Outbound HTTPS Logs** in the system logs menu.
 - `glide.rest.outbound.debug` - true|false - true
 - `glide.outbound_http_log.override` - true|false - true
 - `glide.outbound_http_log.override.level` - String - all

10. Test the Integration:

- You may use Postman for testing purposes.

- For my use case, I created a flow for the incident table triggered when an incident is created or updated where:
 - Short description starts with "Create a JIRA Record:"
 - Incident state is not one of 7, 8
 - Configuration item is JIRA

The screenshot shows the 'JIRA Integration Kan' configuration window, specifically the 'TRIGGER' section. The trigger is set to 'Created or Updated' for the 'Incident [incident]' table. The condition is configured with three criteria: 'Short description' starts with 'Create a JIRA Record:', 'Incident state' is not one of '7' and '8', and 'Configuration item' is 'JIRA'. The 'Run Trigger' is set to 'Once'. The interface includes buttons for 'Delete', 'Cancel', and 'Done'.

- The flow creates an issue on JIRA with the description: "The application crashes with an error message whenever a file larger than 10MB is uploaded. Please assign to Dev Project and contact the Team on 8987986469."

The screenshot shows the 'ACTIONS' section of the configuration. The action is 'Create Issue'. The fields are filled with: 'Project ID' as 'ServiceNow', 'Issue Type ID' as 'Submit a request or incident', 'Summary' as 'System crashes when uploading a file', and 'Description' as 'The application crashes with an error message whenever a file larger than 10MB is uploaded. Please assign to Dev Project and contact the Team on 8987986469'. The 'Priority' is set to 'High'. There is an 'Additional Fields' section with a 'Select a field' dropdown and an 'Add field value' button. The interface includes buttons for 'Delete', 'Cancel', and 'Done'.

Note: The Project ID and Issue Type ID might be empty if there is an issue with the credentials. Please check the output HTTPS request logs to debug the issue. For more information, please check out:

https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB1635414

- It then updates the incident table with the JIRA KEY/reference number and closes the created incident.

- For my use case, I created custom fields - JIRA Number and JIRA CI on the cmdb_ci_appl table.
- Now let's test our Flow:

This integration can be used for many other use cases. I created one for my learning purposes. I will post the Bi-Directional integration next week.
