

SERVICENOW INTEGRATION

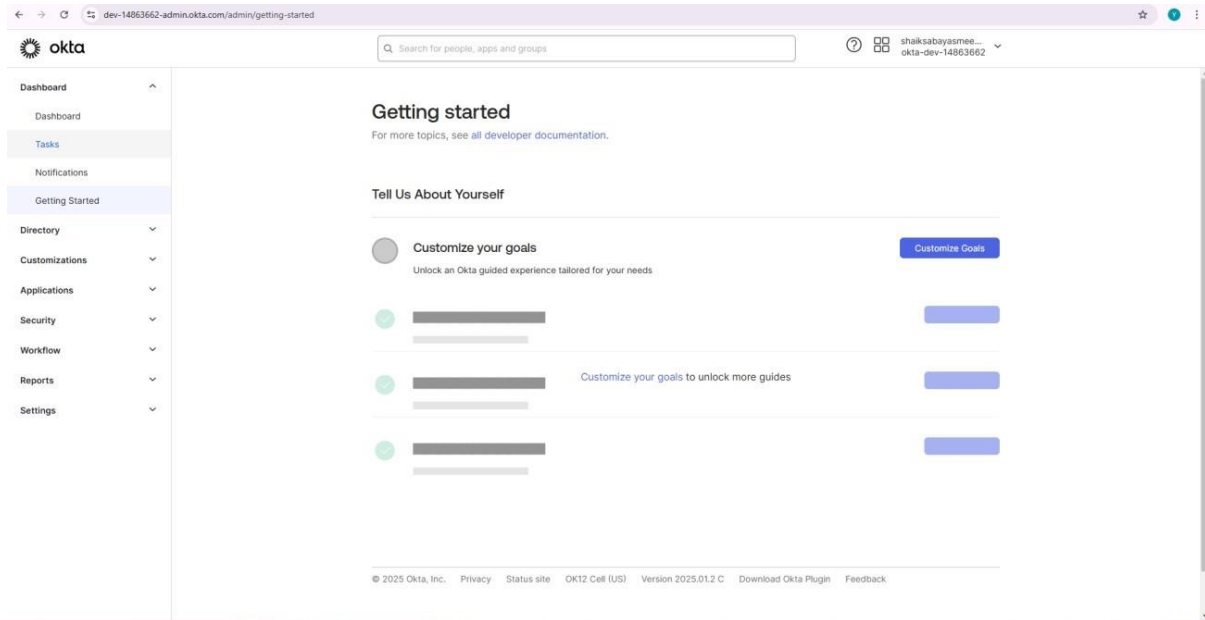

WITH OKTA SSO

Use Cases:

- Enable ServiceNow login method as OKTA SSO (auto redirect to okta login).
- On the login page the user must redirect to OKTA SSO. If already logged in user should land to sp portal page
- If the user has an admin role, land to nav page.do. else navigate to sp portal for non admin users.

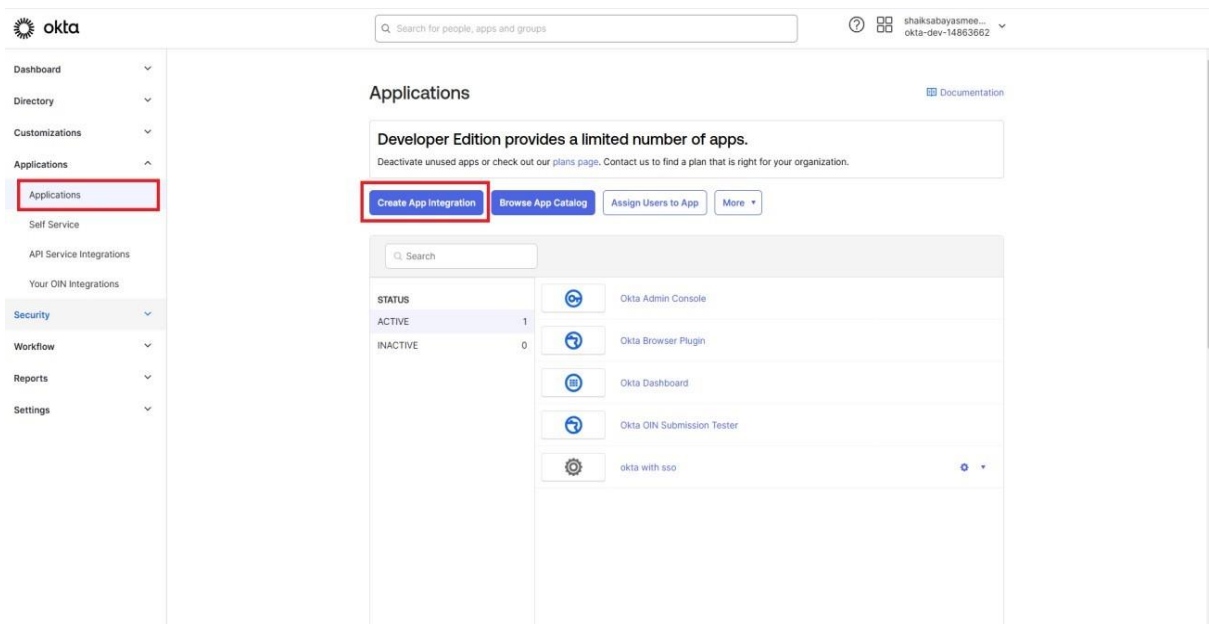

Procedure:

1. Login to okta developer account
 - URL: <https://developer.okta.com/login/>
 - Create an account
 - After you have created an account, you will be redirected to home.

2. Creating Application in OKTA

- In the left side go to Applications and click App Integrations.

- Select SAML 2.0 and click next

Create a new app integration ✕

Sign-in method
[Learn More](#)

- ☐ **OIDC - OpenID Connect**
Token-based OAuth 2.0 authentication for Single Sign-On (SSO) through API endpoints. Recommended if you intend to build a custom app integration with the Okta Sign-In Widget.
- ☒ **SAML 2.0**
XML-based open standard for SSO. Use if the Identity Provider for your application only supports SAML.
- ☐ **SWA - Secure Web Authentication**
Okta-specific SSO method. Use if your application doesn't support OIDC or SAML.
- ☐ **API Services**
Interact with Okta APIs using the scoped OAuth 2.0 access tokens for machine-to-machine authentication.

[Cancel](#) [Next](#)

- Enter App Name and click next.

3 Help Okta Support understand how you configured this application

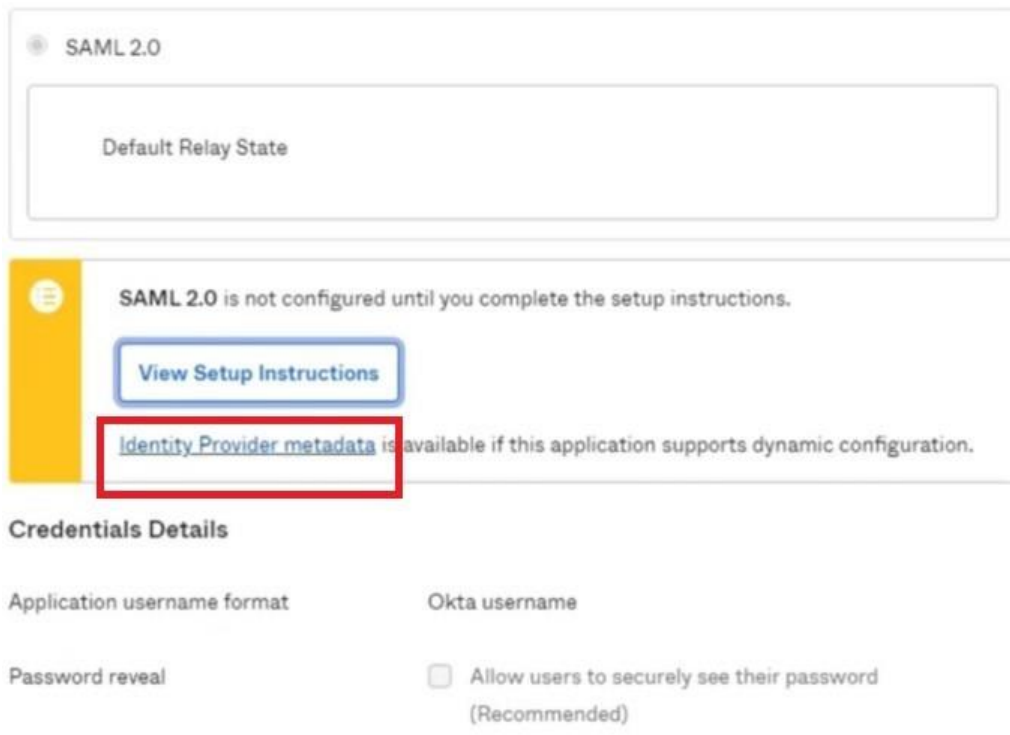

The optional questions below assist Okta Support in understanding your app integration.

App type ☒ This is an internal app that we have created

[Previous](#) [Finish](#)

3. Generate Identity Provider Metadata

- Click on it and copy URL.

SAML 2.0

Default Relay State

SAML 2.0 is not configured until you complete the setup instructions.

[View Setup Instructions](#)

[Identity Provider metadata](#) is available if this application supports dynamic configuration.

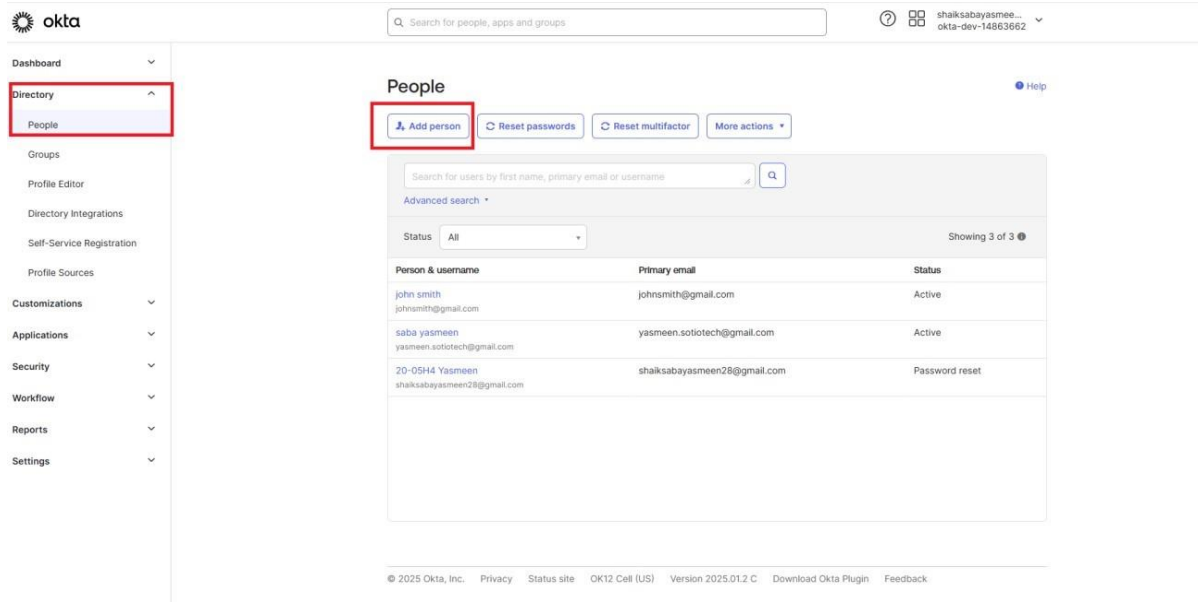

Credentials Details

Application username format Okta username

Password reveal ☐ Allow users to securely see their password (Recommended)

4. Creating users in OKTA and assigning the application to them.

- In the Left-side navigate to directory -> people -> add persons

Create a user and make sure you remember email and password because this is required while logging it to the instance.

The screenshot shows the 'Add Person' form in the Okta interface. The form includes the following fields and options:

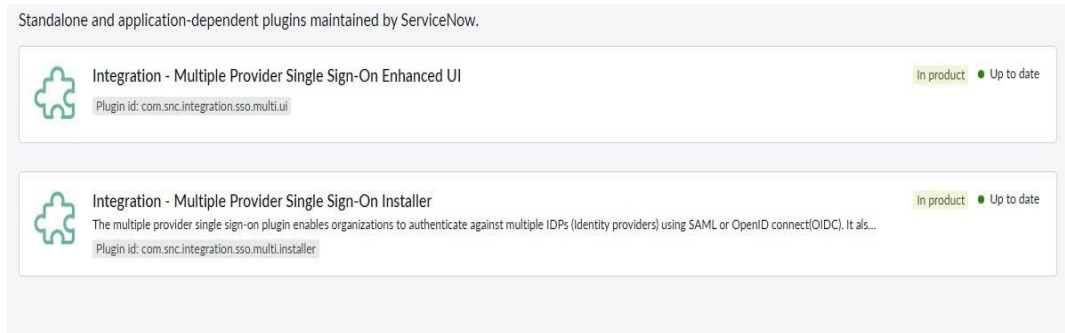

- User type: User
- First name: john
- Last name: john
- Username: johnsmith2@gmail.com
- Primary email: johnsmith2@gmail.com
- Groups (optional): You haven't added any groups
- Password: Set by admin (highlighted with a red box)
- User must change password on first login: ☒

At the bottom of the form, there are three buttons: Save, Save and Add Another, and Cancel.

- select Save.

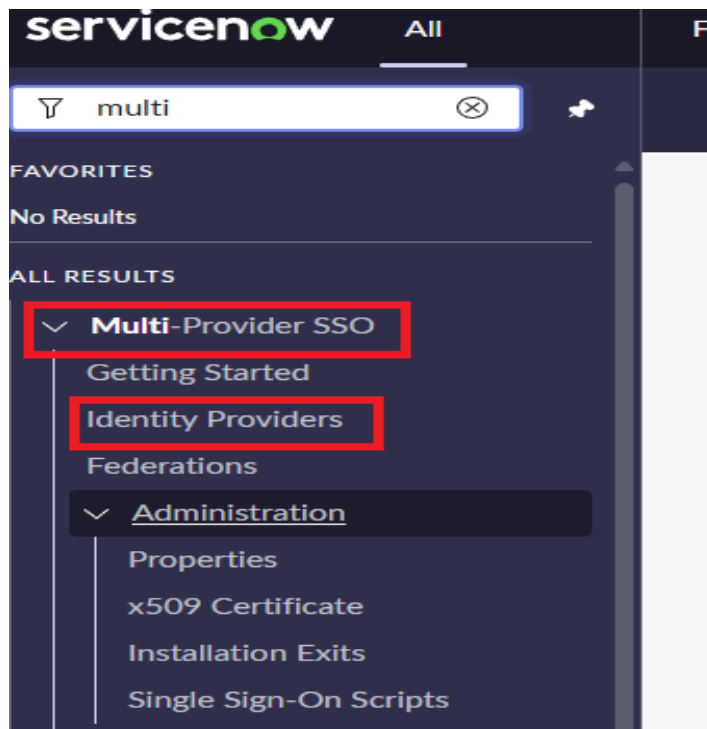

5. Logging into ServiceNow instance and install plugins.

- Install the below plugins

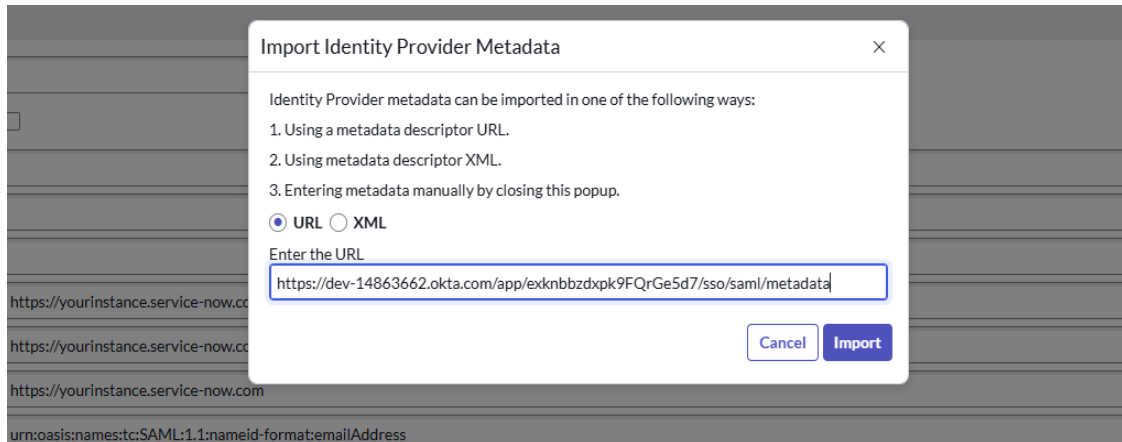

6. Configuring identity providers

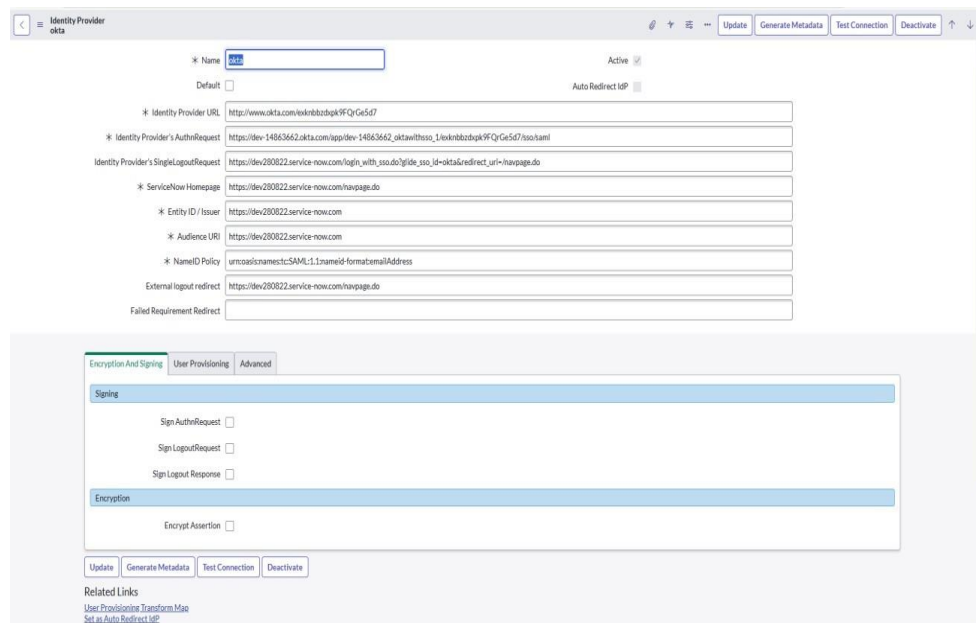

- After your successful installation of plugins
- AppNav -- > MultiProviders --> Identity providers

- Create New --> SAML
- Importing metadata URL that we have copied in OKTA into the identity provider.

- Click Import
- The details would be auto filled.

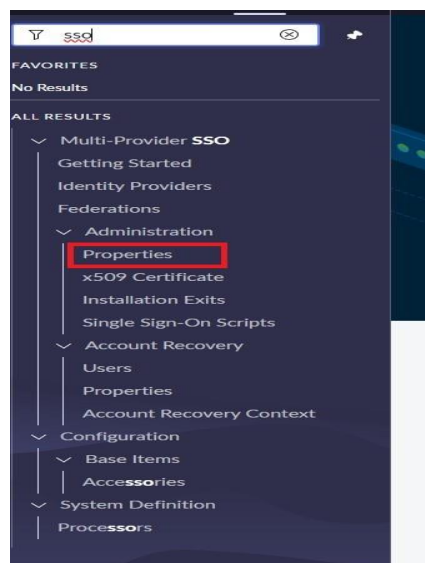

Encrypting and signing section

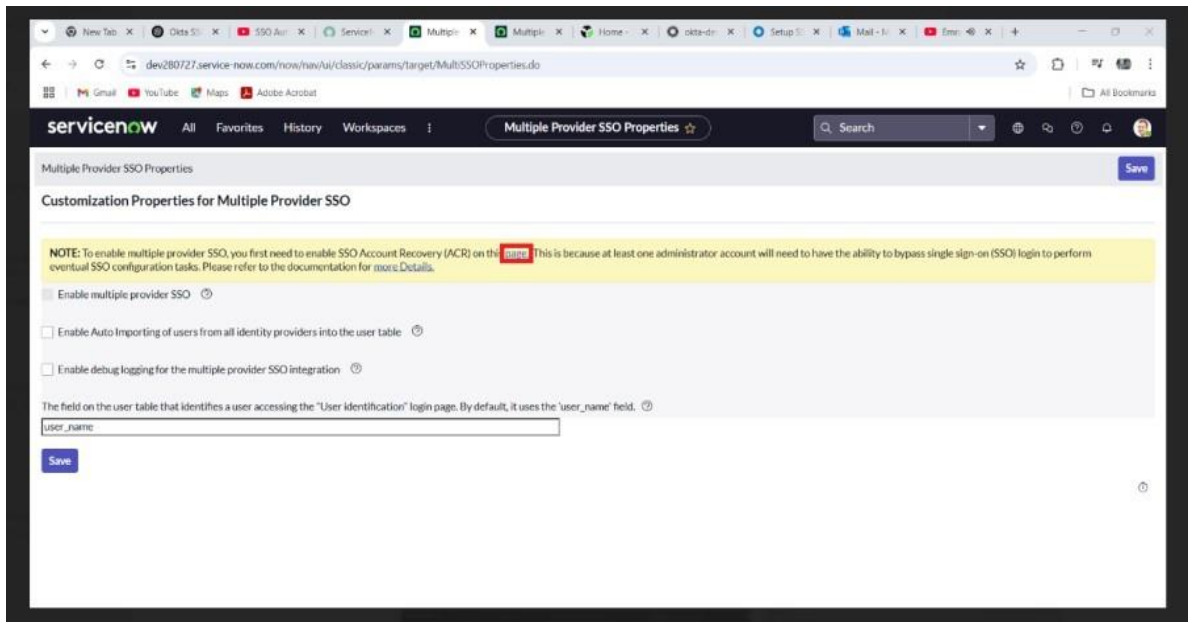

- Select signAuthRequest and fill in keyalias as saml2sp and uncheck it.

- Advanced Section and check the below marked check boxes.

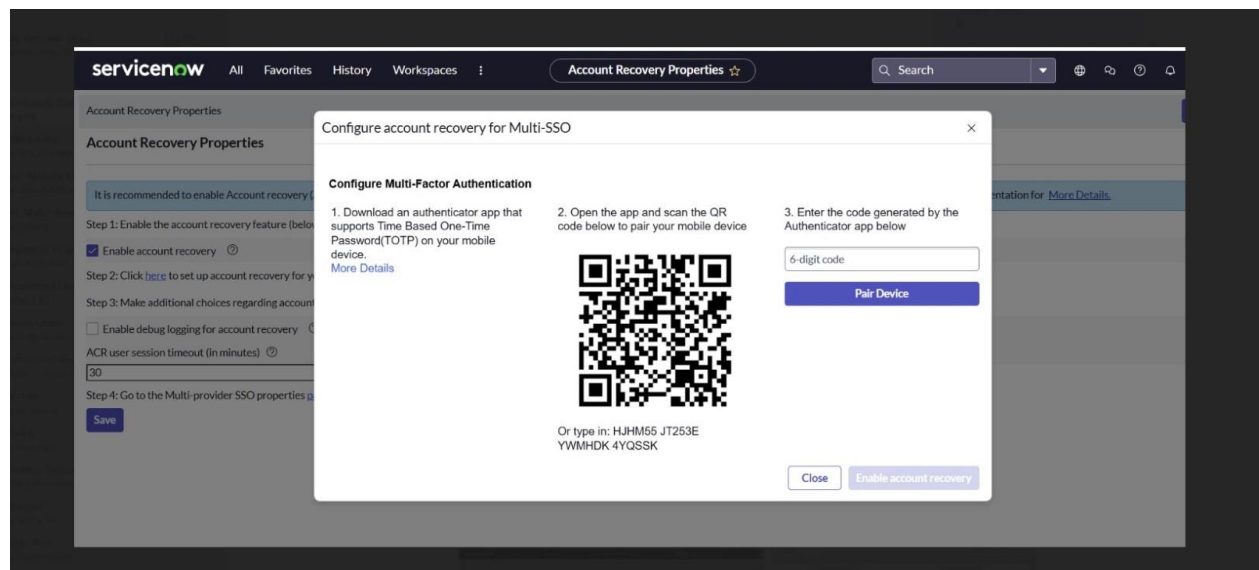

And save it

7. Enable SSO Recovery

- Click on properties and select page check the fields.
- Enable Account Recovery so that it is linked to your mobile for the one-time password.

- Select enable multiprovider SSO and fill in email and save.

Customization Properties for Multiple Provider SSO

Account Recovery is enabled so local login will be blocked except for ACR user.

- ☒ Enable multiple provider SSO [?](#)
- ☐ Enable Auto Importing of users from all identity providers into the user table [?](#)
- ☐ Enable debug logging for the multiple provider SSO integration [?](#)

The field on the user table that identifies a user accessing the "User identification" login page. By default, it uses the 'user_name' field. [?](#)

Save

8. Creating Users in ServiceNow

- Creating a user with same email id that was created in okta
- Make sure you assign a role to it
- Modify the OOB script include(spentrypage)
- Add the below highlighted script

Script Include
SPEntryPage

Name: Application: Global [?](#)

API Name: global.SPEntryPage Accessible from: This application scope only

Client callable: ☐ Active: ☒

Description:

Script

```
72  *  
73  **/  
74  getFirstPageURL: function() {  
75      var session = gs.getSession();  
76      this.logProperties('before', session);  
77  
78      // has roles and is not a Service Portal page - go to UI16  
79      var nt = session.getProperty("nav_to");  
80      var isServicePortalURL = new GlideSPScriptable().isServicePortalURL(nt);  
81      var redirectURL = session.getProperty("login_redirect");  
82      var user = gs.getUser();  
83      var isAdmin = user.hasRole('admin');  
84      if (!isAdmin) {  
85          return "/sp";  
86      }  
87  
88      if (user.hasRoles() && !redirectURL && !isServicePortalURL)  
89          return;  
90  
91      // user may have logged in from a frame the /login_redirect do page will bust out of it
```

- create a system property
- AppNav -> sys_properties.LIST
- Create New

The screenshot shows the 'System Property' configuration interface in Okta. The title bar indicates the property is 'glide.entry.first.page.script'. The 'Name' field is filled with 'glide.entry.first.page.script' and is highlighted with a blue border. The 'Application' dropdown is set to 'Global'. The 'Description' field is empty. The 'Choices' field is empty. The 'Type' dropdown is set to 'string'. The 'Value' field contains the JavaScript code 'new SPEntryPage().getFirstPageURL()'. Below the main fields, there are checkboxes for 'Ignore cache' (checked), 'Private' (unchecked), and 'Read roles' (unchecked). There are also links for 'Write roles'.

- Click Save

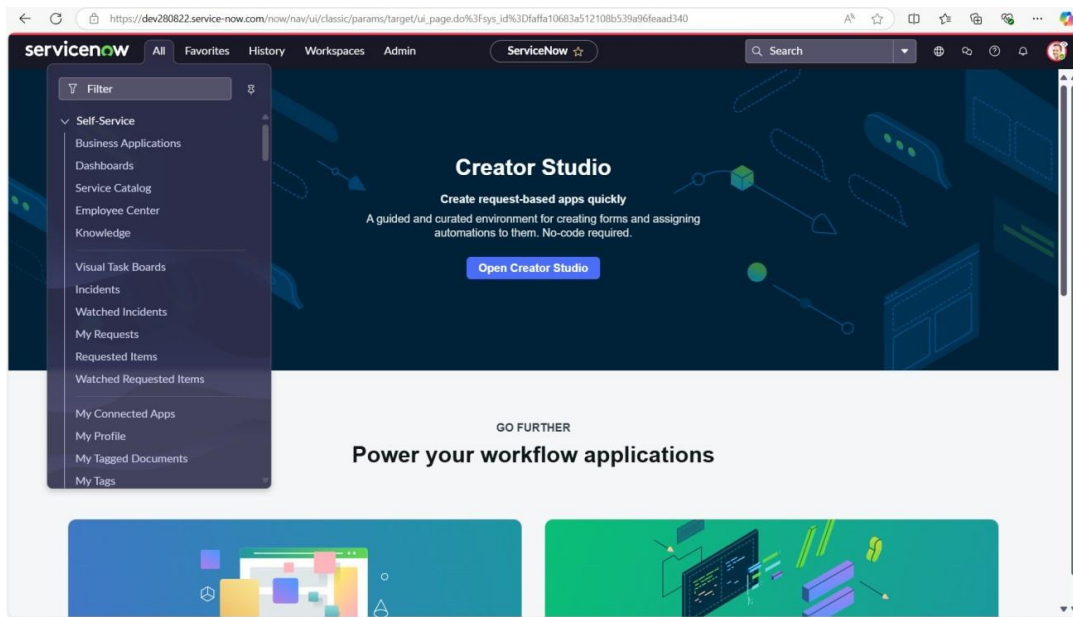

Testing:

- paste the instance URL in new browser window
- Now you will be redirected to OKTA login page

The screenshot shows a web browser window displaying the Okta login page. The browser's address bar shows the URL 'dev-14863662.okta.com/login.htm?from=...'. The page has a 'Connecting to' header with the Okta logo. Below this, there is a 'Sign In' section with a 'Username' field containing 'johnsmith@gmail.com' and a 'Password' field with masked characters. There is a 'Remember me' checkbox and a 'Sign In' button. At the bottom, there is a link for 'Need help signing in?'.

- Enter user credentials and login (created in OKTA)
- If the logged in user is admin it redirects here(navpage.do)

- If the user is not admin it redirects to sp page
