

Incident, Problem & Change

Topics:-

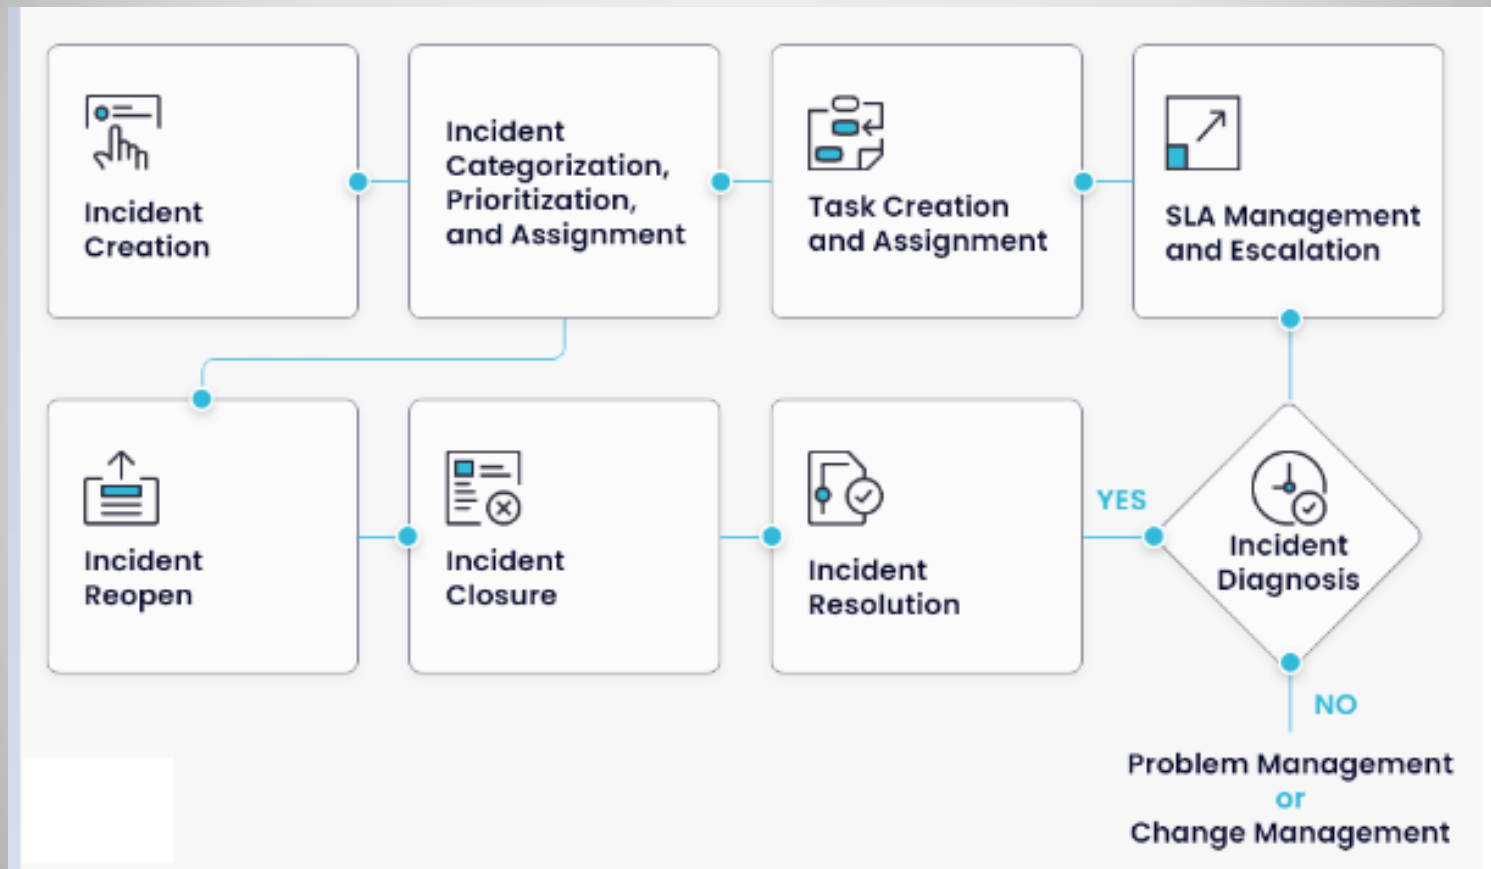

- Incident Management(Life-Cycle)
- Problem Management(Life-Cycle)
- Change Management(Life-Cycle)

- **Incident management-** An incident is an unplanned interruption of an entire service or just a component of one.

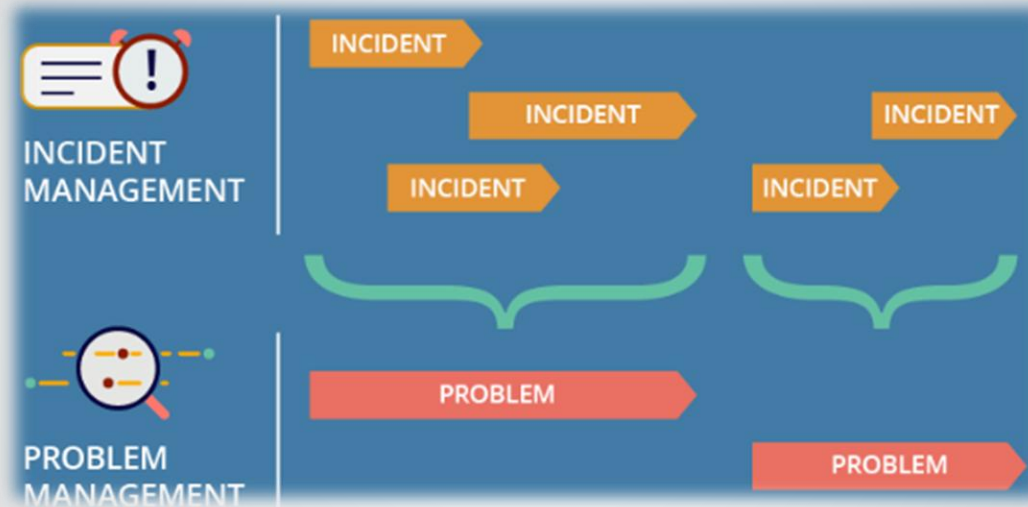

- **Example :-** If your Wi-Fi is not working you will call customer support and they will log the incident for the same in the system.

Incident Life Cycle

- **Problem management –When** the incident is occurring again and again and your work is getting impacted

- **Example :-** If your Wi-Fi is not working you multiple time then customer support/help desk will create the problem to find the RCA(root cause analysis) of the problem.

Problem Life Cycle

- **Change Management** – A request to change may be raised to modify an IT service in order to resolve a problem. An incident can lead to a problem then to change or directly from incident to change.

- **Types of Changes**

Standard Change	A low-risk change that's preapproved and follows documented, repeatable tasks. Example: Service desk request for an IT service
Normal Change	An intermediary-risk change that is not urgent or pre-approved. A thorough review process is conducted before approving.
Emergency Change	Urgent changes that may present high risks if not addressed promptly. Examples: Security threats; power outages
