Test 1

1-cmdb table names:

- Configuration Item `[cmdb_ci]` table stores the basic attributes of all the configuration items.
- Base Configuration Item `[cmdb]` is the base CMDB table for non-IT CIs.
- CI Relationship `[cmdb_rel_ci]` contains CI relationship data.
- Configuration File `[cmdb_ci_config_file]` is one of the CI types.

2- Visual Task Board types (guided-freeform-flexible)

Guided boards can be created from a list and use the values of a specified field (e.g. State) as lanes. Tasks in the list are updated when cards are edited, or their lanes are changed on the Visual Task Board.

Flexible boards are also created from a list, but lane changes do not update underlying task data.

Freeform boards can be your personal organiser to manage any individual task. Lane changes do not update underlying task data.

3-You can use the Data management plugins to define table relationships or minimise performance issues. What are these plugins?

- Many to many task relations
- Database relations
- Data archiving

4-Which CMDB feature tracks the activities and history of data sources as they insert and update CI attributes?

- Cmdb 360
- Multisource cmdb

5- report plugins

1. You can use the ServiceNow **ACL Assessment for Reports** to identify reports that are blocked by `report_view` ACLs (access control lists).
2. The *Report Security* plugin enforces ACL checks when reports are created, deleted or updated.
3. The *Security Jump Start* plugin adds ACL rules to provide a jump start on securing many system tables to make it easier for an organisation to get into production more quickly
4. *Anonymous Report Center* enables users to submit cases without disclosing their identities to agents or admins within their organisations.
5. The *Reporting Statistics Reports* plugin provides reports and dashboards on reporting statistics.

6-Who can add or remove widgets in a dashboard?

- Dashboard owner
- People with edit role to dashboard
- Dashboard_admin

7-The CMDB is the authoritative source of some information, including **Support group, Contact** and **Owner**.

The CMDB is not the authoritative source of all information, such as the contents of all server and application configuration files and server log files.

8-What allows agents to initiate a group discussion from a Workspace task-based or interaction-based record?

Sidebar, **Note:** You can create Sidebar discussions on interaction records from Next Experience's Core UI.

Sidebar is supported in these workspaces:

- CSM Configurable Workspace
- CSM Manager Workspace
- HR Agent Workspace
- ITSM Manager Workspace
- Vendor Management Workspace

9-ServiceNow can import data from which of the following external data source types when a valid transform map is available?

ServiceNow can import data from the following external data source types when a valid transform map is available:

JDBC, **LDAP, OIDC, REST** (IntegrationHub) and Custom (Load by Script).

Data sources are used to create an import set to be processed, if necessary, before being mapped onto a production table.

JSON and **CSV** are different file formats for data import, but they are not external data source types.

10-What related list can you use to extend and track the different types of groups assigned to a Configuration Item? Teams

11-Notification emails include the **title of the knowledge article** in addition to the article ID so you can more easily decide whether the knowledge article is relevant.

12-There is a business requirement to restrict incident reporting to specific roles for better governance. The Development team decided to add a new access control (ACL), so only those roles can view the contents of the reports on the incident table.

What access control operation should they use to allow this access on the incident table?

Report_view

The **report_view** operation is a record-type access control list (ACL) that restricts access to reports. Only users with one of the required roles can view reports containing the restricted resource.

There are two kinds of **report_view** access control lists (ACLs): **report_view** table ACLs and **report_view** field ACLs. **report_view** table ACLs prevent users from viewing report content based on the table specified in the ACL. **report_view** field ACLs prevent users from viewing reports that use the field specified in the ACL in the group by row, column or aggregation.

13-Which application provides a centralised location for creating, categorising, viewing, and governing information related to the flow of work through ServiceNow?

Knowledge management

14-adding favorites

- Add as a favourite from any page **by selecting the star icon in the contextual app pill.**
- Add a module as a favourite from the All menu **by selecting the star icon next to the module name.**
- Add all the modules under an application as favourites from the All menu **by selecting the star icon next to the application name.**
- Add a list as a favourite in the classic environment **by selecting the 'Create Favorite' item on the context menu next to the list title.**
- Add a record as a favourite in the classic environment **by selecting the 'Create Favorite' item on the form context menu next to the record title.**
- Add a knowledge base article as a favourite by clicking the star icon in the header of the knowledge article.

15-activity stream

There are three types of activity streams.

1. **List activity stream:** Streams live activity information for all records on the current list. Click an item to open the record activity stream without opening the record.
2. **Record activity stream:** Appears in forms configured with the activity formatter. You can customize the activities to include.

When you follow a record to view it in the Connect Chat interface, the conversation contains the same information as the record activity stream. Comments entered in the Connect Chat window update the record activity stream.

3. **Visual Task Boards:** Streams live activity information for all task cards in the current task board. Click an item in the activity stream to open the task card and view the activity stream of the record.

16-What type of service catalogue item is used to create an incident or raise an HR case?

Record producer

17-Which script runs when a record is displayed, inserted, updated, deleted or when a table is queried?

Business rules

Use business rules to accomplish tasks like automatically changing values in form fields when certain conditions are met or to create events for email notifications and script actions.

Test 2

- 1- **Dark mode affects** dashboard and reports, assessments and survey, knowledge management.
- 2- **What type of relationship is recommended between Incident and SLA tables to report on incidents resolved by SLA per incident category?** Database view
- 3- **What do access control list rules specify?**
 - 1- the permissions required to access the object.
 - 2- the object and operation being secured.
- 4- An update set is an XML file that contains:
 - 1- A set of record details that uniquely identify the update set.
 - 2- A list of configuration changes.
 - 3- A state that determines whether another instance can retrieve and apply configuration changes.
- 5- **How do you navigate the Now Platform to see a list of catalogue items?**
Service Catalog > Catalog Definitions > Maintain Items
- 6- **Which of the following are database view limitations?**
 1. In a clone request, database view tables cannot be added as a data preserver.
 2. Database views cannot be created on tables that participate in table rotation.
 3. It is not possible to edit data within a database view.
- 7- **What protects applications by identifying and restricting access to available files and data?** Scope
- 8- **Authentication:**
 1. **External Single Sign-on (SSO)** authenticates the user name and password configured in identity providers with a matching user account in the ServiceNow instance.
 2. **The local database** authenticates the user name and password stored in their corresponding user record in the ServiceNow instance.
 3. **Digest Token** authenticates an encrypted digest of the username and password stored in the user record.
 4. **Multi-factor** authenticates the user name and password in the ServiceNow instance and sends a passcode to the user's mobile device where an authenticator supporting Time-based One-time Password (TOTP) is installed, such as Google Authenticator.
- 9- Users with the `admin`, `knowledge_admin`, and `knowledge_manager` roles can access flagged articles by navigating to *Knowledge > Articles > All Flagged*. Users with the `knowledge` role can access their flagged articles by navigating to *Knowledge > Articles > My Flagged*.
- 10- **You can use machine-learning solutions in your ServiceNow instance to predict, recommend, and organise data outcomes. These solutions can help resolve requests faster by categorising, assigning and prioritising them using the Short Description.**

What is the name of this platform function? Predictive intelligence

11- An incident manager is responsible for the Critical Incidents assignment group. The group contains a few team members working on different Incident tasks; however, the incident manager cannot see any tasks on the ‘Service Desk>My Group Work’ list. What of the following could explain this?

- 1- The incident manager doesn’t have itil or service fulfiller role
- 2- The incident manager is not member of the critical incidents group

Note: The My Groups Work module lists all unassigned active and non-pending tasks where the user is a member.

12- What filter condition allows you to report on incidents created from the ‘Create Incident’ record producer where the value for the ‘Urgency’ question is ‘2-Medium’?

Apply a filter condition ‘Questions.Create Incident.Urgency’ is ‘2-Medium’

13- What framework in Flow Designer helps you select the next component in your flow from a list of AI-generated recommendations? Now assist

The system can only recommend actions, flow logic, and subflows that are available from ServiceNow.

Note 1: You can use Flow Assist to generate flows from text prompts and generate recommendations for the next step of a flow. Flow Assist is part of the Now Assist for Creator application.

Note 2: Flow generation allows you to create multi-step flow outlines with generative AI. Flow outlines require configuration to add input values and data references.

14- You can add knowledge article URLs to your sitemap to improve content indexing by public search engines. What do you configure to achieve this for the Knowledge Portal? Sitemap generator record

Note: All active sitemaps automatically regenerate once a day and include content from any of their active sitemap definitions. Previous versions of the sitemap are deleted.

15- What changes are automatically reflected in dynamic application services?
Any changes to CI relationships in the CMBD CI relationship table

16- What can be set up to auto-assign all new Hardware category Incidents to a particular group? Business rules, assignment rules, data lookup rules

Note: that business rules can take precedence over assignment rules when they run after the assignment rule. Data lookup rules take precedence over assignment rules because they always run after.

17- Why do organisations fail to complete implementation or realise business value from the CMDB?

- 1- Inconsistent data quality
- 2- Unknown configuration items
- 3- Ill-Defined relationships among configuration items

Note: Our customers often use Discovery, Service Mapping, and Event Management to keep the CMDB current and healthy with critical service information.

18- What platform feature, combined with field normalisation, does CMDB use to automatically check a CI's uniqueness? Identification and reconciliation engine (IRE)

This allows only authorised data sources to update specific CI classes, normalises the data, and then loads the data into the CMDB to ensure the most recent and accurate profile of that CI.

19- Reports:

- **Scheduled reports** can be distributed in PDF, CSV, or XLS format. **Graphical reports** can be distributed in PNG or PDF format. **Multilevel pivot reports** can only be scheduled in PDF format. To create scheduled reports, you must have both the report_user role and either the report_admin or report_scheduler role. Note: It is not possible to schedule Calendar, Map, Pivot Table, and Single Score reports.

20- What type of Flow Designer trigger is needed for an Inbound Email Action?

Application-based, Notes:

- 1- Use record triggers to start a flow when a record is created or updated.
- 2- Use date triggers to start a flow after a specific date and time or repeatedly at scheduled intervals.
- 3- Use application triggers to start a flow when application-specific conditions are met.

21- Which Chatbot on the Now Platform allows you to send notifications directly to Slack and Microsoft Teams users? Virtual agent

22- What service catalogue component allows for multiple catalogue items to be logically grouped as one request? Order guide (administrator and catalogue administrator can create order guide)

23- What operations can you do on the homepages with the Homepage deprecation help tool?

- 1- Retire a homepage
- 2- Convert a homepage
- 3- Restore retired homepages as dashboards

24- What are the two available knowledge article types? HTML, Wiki

25- How do you group the records on a list based on the State field?

- 1- On the list context menu (or the title bar), click the context menu and select Group By.
- 2- Right-click the column name (or click the context menu on the column title) and select Group By.
- 3- Select the natural language filter, type 'group by' and the field name, and then select the Ask button.

26- Which collaboration tool can you access using the bubble icon on the banner? Connect chat

Features include:

- 1- Direct conversations between two users.
- 2- Group conversations between three or more users.
- 3- Conversations linked to records. Comments and work notes appear in conversations in real time, and users can update the record directly from the conversation.
- 4- Drag-and-drop sharing of links, files, and records.

Note: Core UI is required to use Connect Chat, so it is not available in the Next Experience UI. Certain Connect Chat functions are available in Next Experience using Sidebar, starting with Tokyo.

27- What are the three main tables in the CMDB? cmdb , cmdb_ci, cmdb_rel_ci

28- What do Application Services represent from an Application Portfolio Management (APM) perspective? Installed instances.

Test 3

1. By default, the following roles cannot be delegated: **admin**, public, nobody and **role_delegator** (a user with the role_delegator role cannot delegate this role to other group members).
2. The health dashboard provides a single view of the data quality at the CMDB, CI class and CI levels using **completeness, correctness and compliance scores**.
3. If **no coalesce** is defined in the import process, all imported rows are treated as new records, and existing records are not updated.
4. **The Incident Database views for the Service Management plugin in the base system are:**
 - incident_sla
 - incident_metric
 - incident_time_worked
5. **team members can collaborate on tasks with:**
 - user presence
 - activity stream
 - Work notes
 - Connect chat / Sidebar.
6. **What are the different ways for ServiceNow tables to be related to each other?**
 - One to many
 - Many to many
 - Database view
 - Extensions
7. **What role is required to toggle the template bar and apply global templates to the forms?** No role
8. **What sorting options are available when searching for a knowledge article on the Knowledge portal?**
 - Alphabetical
 - Relevancy
 - Newest
 - views
9. **Where can you organise form sections and related lists into tabs in classic forms?** User menu > preferences > display
10. **What IT challenges can be solved with the CMDB?**
 - consolidating disparate Configuration Item (CI) data into a single Configuration,
 - regularly maintaining complex data for accuracy
 - making sense of data to drive decisions and services.
11. **What feature facilitates synchronous collaboration within one record and allows you to see who is online, their current status, and what they view or edit in real time?** User presence

12. What are some of the benefits often recognised by branding your instance?

Accelerate adoption rate, gain user trust, create a shared identity.

13. What allows you to see more information on the same screen real estate when using Visual Task Boards? Compact cards

14. What can you include in the Email Client Template so you can reuse them when replying to or forwarding emails? Attachments

15. What field type on a form has a clickable icon that provides a preview of the associated record? Reference field

16. Which of the following are true statements about platform scripting?

- Business rules are not real-time and do not monitor fields on a form.
- UI Actions can execute both client-side and server-side.
- Data Policy can be run as a UI policy client-side.

17. Which of the following defines an application service in the best way? a set of interconnected applications and hosts configured to offer a service to the organization

18. What application enables you to discover Personally Identifiable Information (PII) within the ServiceNow instance and classify, report, or act on the PII?

Data discovery

Other choices:

1. *Data Classification:* To group data by type using pre-defined or user-defined data classifications.
2. *Data Privacy:* To classify sensitive data, remove personally identifiable information (PII) from user data in a production instance, and anonymise data in non-production instances.
3. *Data Filtration:* To control access to tables and records based on subject attributes when performing read queries.
4. *Data Separation:* To restrict access to sensitive data based on a lens hierarchy and its leaf node.

19. An Access Control List (ACL) rule only grants users access to an object if they meet all of the following permissions required by the matching ACL rule.

- The condition must evaluate to true
- The script must evaluate to true or return an answer variable with the value of true
- The user must have one of the roles in the required roles list. If the list is empty, this condition evaluates to true
- [Record ACL rules only] The matching table-level and field-level ACL rules must both evaluate to true.

20. What model/standard across applications helps track life cycle stages and stage statuses for CIs effectively? Common service data model

21. What plugin must be activated to onboard a large volume of external users to a custom application in your instance? External User Self-Registration (com.snc.external_user_self_registration)

22. What are the benefits of Flow Designer?

- provides configuration and runtime information to create, operate, and troubleshoot flows from a single interface.
- provides natural-language descriptions of flow logic
- promotes process automation by enabling subject matter experts to develop and share reusable actions.

23. Which of the following statements are true about import sets?

- Creating an extremely large import set can cause delays and system outages.
- cannot add data to encrypted fields.
- You can import data from several different file formats or external data sources.

24. Which of the following is a requirement for using the CMDB Data Manager?
ensure that there is an active life-cycle rule corresponding to each target class in a life-cycle policy

Note 1: Life-cycle rules in the base system are inactive, and you must activate any rule that you want to use with a life-cycle CMDB Data Manager policy. To activate a life-cycle rule, set its Active attribute to true.

Note 2: Each CMDB class can be associated with only a single rule. Life-cycle rules are stored in the CMDB Retirement Custom Definitions [cmdb_retirement_custom_definitions] table.

25. What is granted to non-administrators for them to develop applications?
Delegated development

26. What results are displayed on the menu when searching for the keyword 'service' in the Filter field?

- any module with a name containing service (Any applications, sections or modules with names containing 'service')
- All modules and sections within the service disk application (any applications, sections or modules related to those containing 'service')

27. Report tabs:

- You can choose colours, title and chart properties under the Style tab.
- You can define the report grouping under the Configure tab.
- You can select the visualisation format under the Type tab.
- You can enter a Report name, Source type and a table or data source under the Data tab

28. What dictionary attribute do you use to list all the columns you want visible on a reference field's drop-down list? Ref_ac_columns

ref_auto_completer specifies the name of the client-side JavaScript class that creates the drop-down auto-completion choices.

ref_ac_columns_search enables auto-complete to match the text in the columns listed in the ref_ac_columns attribute. Set this attribute to true to allow the auto-complete to match the text in all reference field columns. By default (or when this attribute is false), auto-complete only matches the text in the display value column.

ref_ac_order_by specifies the reference table column that sorts the auto-completion choices.

29. **What feature creates reusable components to run everyday tasks in Virtual Agent conversations?** Topic blocks
30. **What report type requires access to the data to view it?** List report
31. **What are the different levels of ServiceNow security before an end-user can perform CRUD (Create, Read, Update, Delete) operations on a table?**
 - User Authentication / Login
 - Application and Modules Access
 - Database Access
32. **Which knowledge feedback option CANNOT be disabled at the knowledge base level?** all of them can be disabled
33. **Which icon allows you to access resources such as ServiceNow documentation and user guide?** Question mark icon(aka help icon)
34. **Which of the following are the accessibility enhancements in the Service Portal application?**
 - Text size can be increased to 200% through your browser settings.
 - Text-to-speech labels that you hear match the labels you see on the screen.
 - New content is spoken by the screen reader without disturbing the current flow.
35. **Where do you define user conditions to determine who can access catalogue items?** User_criteria
36. **What integration with Catalog Builder enables you to translate the content of the catalogue items on the Catalog Builder dashboard?** Localization framework
37. **Which form view is displayed when clicking on the reference icon of a field in a form?** Sys_popup
38. **What can you do with homepages on upgraded instances when the Next Experience UI is enabled?** View existing homepages
Note 1: If you are using responsive dashboards, you can convert your homepage to a dashboard. Advantages include new sharing functionality and easier layout management.

Note 2: If Unified Navigation is enabled, it is not possible to create new homepages or edit existing homepages.

39. What sections on the Reports page allow you to see the different audiences and their visibility on the reports? All, global, group, my reports

40. Where can you view how a catalogue item appears in a conversational interface and modify the item if required? In catalogue builder

41. What is a CI?

- A configuration item (CI)
- tangible (e.g. hardware, software, servers) entities
- intangible (e.g. business services, email) entities.

Test 4

1-Which of the following are the data visualisation formats in ServiceNow? Reports, dashboards and form charts

2-Which of the following operation is a record-type access control list that restricts access to reports based on a role? Report_view

3-Which option in the Email Client Template allows you to include attachments from emails while replying to or forwarding emails? Include attachment from email

4-Which of the following indicates the type of relationship for the bi-directionally related tables, and the related records are visible from both tables in a related list? Many to many

5- Which of the following is an example of a CI Class switch? reclassifying a CI from the Linux Server [cmdb_ci_linux_server] class to the Windows Server [cmdb_ci_win_server] class.

6-What are the three reasons to use ServiceNow Mobile apps?

- Ability to submit, view, and update requests, issues, and tasks.
- A global search to find people, services, items, and articles.
- Push notifications for access to critical information instantly.

7-Notes:

- Service Catalogue contains a collection of orderable products and services.
- Service Portal is a customised interface used to build and submit an order.
- Service Catalogue Request is a collection of one or more ordered items.
- Requested Items are products placed in the shopping cart.

8-Which of the following is true about the CMDB Data Manager?

- It can create policies that govern CI life cycle stages such as retirement and deletion.
- It is a wizard-like tool that provides a comprehensive solution for managing CIs.
- It is a policy-driven framework for managing CI life cycle operations.

9-Each time a knowledge article is viewed, a record is added to which table? Kb_use

10-Cascade-cleanup operations apply when you enable the dependent CIs management feature. However, the recommendation is to apply the same operations to orphan-dependent CIs that existed in the CMDB before enabling this feature.

What are the reasons for this recommendation?

- Because Cascade-cleanup operations apply only from when the dependent CIs management is enabled.
- To improve the overall performance and data integrity of the CMDB.

11-At what levels can User Criteria be used in Knowledge Management to control who can read and contribute? Knowledge Base, Knowledge Article, and Knowledge Block

12-What minimum role is required to subscribe to or unsubscribe from a Configuration Item? Cmdb_read

13-Which of the following business needs can be addressed by Flow Designer?

- orchestrate business processes across services with little technical user knowledge
- reduce technical debt, such as reducing scripting to simplify upgrades and deployments
- integrate with 3rd party systems

14-Who can contribute if no User Criteria are specified for 'Can Contribute' in a Knowledge Base? Knowledge base manager

15-You can import data from:

- A local source file (e.g. XML, CSV, XLS, XLSX, JSON)
- A network server by providing a path and authentication information
- An LDAP connection
- A JDBC connection

16-What application/functionality allows you to generate a report by entering a query instead of going through the full Report Designer menu? Analytics Q&A

Notes:

- Analytics Q&A gives you a choice of data sources and picks an appropriate visualisation.
- Analytics Q&A requires Natural Language Query (NLQ) and supports multiple languages.
- Note: Analytics Q&A is not available when using Microsoft Internet Explorer.

17-Which of the following is a way to add an application to a ServiceNow instance for development?

- use Studio to import an application from source control.
- launch Guided App Creator to create an application

18-Which of the following are possible outcomes when coalescing detects a match between a record in the staging table and a record in the target table?

- keeping the record already in the target table
- overwriting the record in the target table with the source data.

19-When using Manage Developers, what deployment permissions can be assigned to a group or user for a specific application?

- Upgrade App
- Publish to App Store
- Manage Update Set

20-A fulfiller has completed all tasks for one of the items in a request, and the tasks are set to Closed.

What happens in the workflow?

The requested item is automatically set to closed complete

Notes:

The state closure in the request fulfilment process of a catalogue item depends on the status of the associated catalogue tasks, request items, and the request. Here is the state closure dependency between a catalogue task and RITM:

- If all catalogue tasks are closed as Closed Complete, the RITM is closed as Closed Complete.
- If at least one catalogue task is closed as Closed Incomplete, the RITM is closed as Closed Incomplete.
- If all catalogue tasks are closed as Closed Skipped, the RITM is closed as Closed Skipped.

21-What value does the Condition field in a Business Rule return if the field is blank?

True

22-Which solution is NOT a best practice when configuring Assignment Rules or Predictive Intelligence? setting an Assignment group based solely on Subcategory (Category = None)

23-Which field data type adds a report to a form? Chart

24-Which field on a Configuration Item (CI) record is recommended for routing Incidents to the appropriate group to resolve CI-related incidents quickly? Support group

25-Which of the following can be used to create configuration items (CIs) in the CMDB?

- Creation triggered by asset management.
- Creation via service catalogue fulfilment processes.
- Creation via the change management process.

26-Where in the Flow Designer can you find information about the actions you add to a flow? Help panel

27-What represents a standard and shared set of service-related definitions across the products and platform that will provide prescriptive guidance on service modelling within the CMDB? Common services data model (CSDM)

28-Who has access to create, edit or delete sorting criteria in Visual Task Boards? Owner of the board

29-Enhanced notification preferences enable you to easily change your preferences and choose which notifications you prefer, where and when you want to be notified. What options are available for users when setting their notification preferences in Next Experience?

- Enable or disable a particular channel for receiving notifications.
- Create, edit, or delete notification devices for instant messages, email, SMS, and voice.
- Create custom notifications and subscribe to notifications important to you.

30-Which portal allows you to discover catalogue items and record producers based on their topics and taxonomy? Employee center

31-You can add human-readable keywords to the URLs of portal pages to improve search engine optimisation (SEO) and click-through rates and help users understand what to expect on the page.

What can be added as human-readable keywords to help with SEO?

- Dynamic page variable
- Static content

32-What happens if you select Publish when creating knowledge articles manually or by import? trigger the publish workflow assigned to the knowledge base.

33-What application enables you to understand user web and mobile experiences by visualising your metrics and interactions through an interactive dashboard? User experience analytics

34-What are the three different request methods in the Service Catalogue? Submit, order, request

Notes:

Order is the default method that displays the confirmation dialogue box, and the delivery information is editable.

The Request method displays the confirmation dialogue box but not the delivery information.

The Submit method does not display the confirmation dialogue box or the delivery information.

35-Who can create additional ad-hoc tasks for a requested item? Fullfillers with permissions

36-Which of the following is a key difference between Reporting and Performance Analytics? Performance analytics shows snapshot of data taskn over time while reports shows snapshot of the current state of data

Note: Reporting answers the question of 'Where are we today?' while Performance Analytics answers the question of what is happening over time.

37-Which of the following statements are true about Dashboards?

- Dashboards are configured using a drag and drop canvas
- can contain widgets and tabs

Notes:

Applications usually have a Dashboard for each persona because different user types are interested in different information.

Dashboards can have as many widgets as needed to convey the required information from an application or process.

Access to Dashboards is restricted by role. However, all users can see Dashboards that do not have a role assigned.

38-Which of the following are the notification preferences that users can manage?

- Disable recipients of specific notification
- Enable/disable notification
- Add a new channel
- Apply a schedule

39-Where can fulfillers navigate to find catalogue tasks assigned to them and their groups to fulfil requests?

- Service desk > my groups work
- Service desk > my work

Tasks in the My Work module are assigned to individuals

Tasks in the My Groups Work module are assigned to a group but not yet assigned to a specific user

40-Which of the following describes creating a field on a table with Form Designer?

From the field types tab, drag the field type onto the form and configure the field

Test 5

1-Which one of the following is NOT part of a workflow? Connector

Note: parts of workflow are node, transition, begin activity, end activity

2-Different form templates can be applied to a form by accessing the Template bar

Note: Use the template bar to apply, edit, and create templates.

3-How can you integrate third-party data into the Configuration Management Database without compromising its integrity? IntegrationHub ETL

4-What types of tests can be run by users to make sure CMDB works after upgrading and deploying new applications or integrations? Quick start tests

5-What action is recommended when you want to perform system maintenance? Terminate logged in users sessions

6-What are the two types of inbound email actions?

- Record action: setting a value for a field in the target table.
- Email reply: sending an email back to the source that triggered the action.

7-The Now Platform is an example of which cloud computing model? Application platform-as-a-service (aPaas)

Note: Application Platform as a Service refers specifically to PaaS platforms specialised in cloud-based application development.

8-There are five steps to Easy Import:

- Download Excel Template
- Complete Excel Template
- Upload Import Data
- Preview Import Data
- Finalise Import

9-Which role can switch their form view? View_changer

10-When a CI is set to retire, dependent CIs management data processes attempt to cascade-update all the CIs depending on that CI to retire. What table are the dependent CIs added to when a parent CI is set to retire? cmdb_dependent_ci_ledger

11-Which group types are provided in the base system? Itil, survey, catalog

12-Which of the following are true statements about Data Policies?

- Data Policies are script-free, server-side application files.
- Data Policies have a condition as part of the trigger.

- Data Policies can take different actions when the Conditions field evaluates to true or false.

13-Which field type allows users to use positive or negative values? FX currency

14-What visualisation types allow you to add multiple data sources of the same type in the UI Builder? Bars, time series

15-What is a stakeholder's role in implementing and maintaining the CMDB?

determine the specific CI information required to support these capabilities and build organisational buy-in.

16-What user role can ONLY view the configuration and execution details of flows and subflows? [Fd_read_flows](#)

17-A field can be added to a table and form by accessing which part of the Form Designer interface? Field navigator

18-How do you verify that CMDB is still operational after upgrades and deployments of new applications or integrations if you have a customised CMDB?

Copy and configure quick start tests

19-Which menu can users access to display actions that involve creating quick reports, configuring lists and exporting data? [Column context menu](#)

20-What can administrators use in the Service Catalog to simplify the complex multi-form input-taking experience? [Service-catalog wizards](#)

21-Which of the following can you do when creating a service catalogue variable?

- Make a variable read-only or hide it while defining the variable.
- Make a question choice inactive.
- Make a group of CheckBox variables mandatory in Service Portal.

22-Which option enables you to sort Visual Task Boards using criteria you create? Edit filter and sort

23-Administrators and users with the 'personalize' role can create view rules determining which views are conditionally available or pertain to specific user roles. How do users know what form view they see when accessing a record?

it is listed next to the record's display name in the form header or by hovering over the record's display name

24-How do you delete related records from the archive log and archive (ar_) tables? Create archive destroy rules

25-How can system administrators speed up loading large lists? By removing the calculation of the total number of records

26-How do you embed report visualisations in the body of scheduled report emails? Select embedded PNG

27-Catalog Builder allows you to manage and maintain catalogue items using a visual and guided experience. Where do you navigate to access the Catalog Builder?

All > service catalogue > catalogue builder

28-Here are some of the benefits of Flow Designer:

- Centralised: Flow Designer provides a single environment for building and visualising business processes.
- Robust: Flow Designer provides configuration and runtime information to create, operate, and troubleshoot flows from a single interface.
- User-friendly: Flow Designer provides natural language descriptions of flow logic.
- Repeatable: Flow Designer promotes process automation by enabling subject matter experts to develop and share reusable actions.
- Scalable: Flow Designer allows extending flow content by subscribing to Integration Hub or installing spokes.

29-How can you modify data pill values in Flow Designer without writing scripts? Use transform function

Test 6

1-Given that the prebuilt conversations in Virtual Agent Lite are read-only, how do you make the conversations available to your end users? Duplicate and publish the topics

2-How does ServiceNow process an inbound email with a watermark of an existing record?

updates the existing task according to the action's script.

3-Which of the following can you do using the Catalog Builder?

- configure the Catalog Builder experience for catalogue item editors.
- easily transfer catalogue items published through Catalog Builder using exclusive update sets.
- configure the default value for a question in Catalog Builder

4-Where can users author cross-enterprise workflows and create a single, unified process on the Now Platform? Process automation designer

5-Which of the following record operations can be secured by ACL rules?

ACL rules can secure the following record operations:execute, create, read, write, delete, **edit_task_relations**, edit_ci_relations, **save_as_template**, add_to_list, list_edit, report_on, report_view, and **personalize_choices**.

6-Which tool do you use to add multiple homepages as tabs to a single responsive dashboard? Homepage deprecation help

7-Which action allows you to navigate to the Now Platform from Catalog Builder to update any advanced feature for catalogue items? Edit in advanced view

8-Using the flow diagramming view, you can create and view flows as diagrams and see the paths a flow can follow. Where do you go to install the Flow Diagramming application?

ServiceNow store

9-You can add the following types of information to Service Portal pages to improve SEO:

- Human readable keywords in URLs.
- Meta tags that include information about the page or portal in the <head> section of a page.
- Dynamic page titles that are descriptive of the page contents.
- hreflang tags that specify all the available languages of a page.
- Canonical URLs that specify which pages to index from sets of duplicate URLs.

10-Three different list control levels are:

- list title menu,
- list column context menu
- list fields context menu.

11-What is the single location for all the import sets and concurrent import sets for a scheduled data import chain? Execution contexts

12-What details can you find in the import set record after running an import?

- Import logs
- Import set runs
- Import set rows

13-What can you do in the SLA Timeline for a task?

- View the progress of all types of task SLAs, OLAs and underpinning contracts.
- View related task updates.
- Identify why a task update triggered a specific stage in the task SLA.

14-Which of the following is supported while working with or ordering catalogue items in the Service Portal or the Employee Center? Drag and copy attachments

15-What can you leverage on the ServiceNow Platform to eliminate scripting for a catalogue item or a variable set? Data lookup rules

16-Catalog Builder allows you to configure a catalogue item to auto-populate a question value based on a 'Reference' or 'Requested For' type question.What is the source of these reference questions?

- current catalogue item
- the associated single-row variable sets.

17-End users without roles who visit a full platform URL are redirected to a portal. What is the default portal for new (zBoot) instances? Employee center

18-You can access Configuration Hub in one of the following ways:

- Using left navigation: Navigate to All > Admin Center > Configuration Hub.
- Using the Admin tab option: Navigate to Admin > Configuration Hub.

19-Which of the following field types have a one-to-many relationship? Glide list, document id field, reference field

20-Which of the following tabs are available by default for a submitted request on the Standard ticket page in Service Portal? Activity and attachment

21-Which of the following are the features of delegated development and deployment?

- Application Collaboration
- Allow delegated developers to delete applications
- Assign source control permissions

22-Which feature enables you to add related entries for Identification and Reconciliation Engine (IRE) identification rules? CI class manager

23-Which Catalog Builder step allows you to add topics to the catalogue items and record producers so they are discoverable on Employee Center? Location

24-What actions can you take with Flow Designer?

- look up and delete multiple existing records as a single action
- duplicate an action or subflow within a flow
- test a flow, subflow, or action in the background.

25-At what point is the resolution SLA escalated to the task assignee's manager with automatic notification for the first time? At 75% time elapsed

- At 50% of time elapsed, to the current Assigned to and CI Supported by the user.
- At 75% of time elapsed, to the current Assigned to and assignee's manager.
- At 100% time elapsed, to the current Assigned to and assignee's manager.

26-What do you use to set values for the mandatory fields that are not in the import spreadsheet? For example, when data is imported into the Choice table for Categories and Subcategories.

Source script

27-You can test a flow, subflow or action in the background and run it with sample data. What is bypassed in the Flow Designer to allow testing? Flow trigger conditions

28-You can configure a sample text for a knowledge article template field that appears when you create a knowledge article. What text do you see on the article template selector for a field with an empty 'Preview text' value? A random text

29-Which feature enables you to maintain a unified content categorisation across different content types, such as catalogue items, knowledge articles, and community posts?

Taxonomy

30-What authentication method is used as a Single Sign-On (SSO) identity provider (IdP) to allow users to log in to ServiceNow using their social identity provider, like Google and Okta? OpenID connect

31-What notification actions can be accepted in provider notification definitions?

- Scriptable Action
- Flow Action
- Virtual Agent

Beingfluid questions bank

Virtual agent

1-How can users interact with agents at their convenience through Virtual agent?

Asynchronous chat in the web channel

2-Select three things a Virtual Agent can access:

- Knowledge Bases
- Service Catalog
- System records

3-Which capability allows end users to configure virtual agent to intercept and help resolve submitted incidents? Issue auto resolution

4-Which conversational interface allows you to preview and modify a catalog item in catalog builder? Virtual agent

5-Which three from the list below, does Virtual Agent offer a web-based interface for? Service portal, Ios, android

6-How can you deactivate link unfurling feature in Virtual agent conversations? By updating system property com.glide.cs.enable_link_unfurling to false.

7-Which three, third-party messaging apps are supported by Virtual Agents? Workspace, Microsoft teams, slack

Update sets

1-Select a true statement from below with respect to Update Sets. Do not move the default update set between instances

2-What happens to changes on the same object in multiple update sets when update sets are merged? The most recent change to the object will be saved in the merged update set

3-Navigate here to upload an update set: All > System Update Sets > Retrieved Update Sets

4-To retrieve an update set from a remote instance, in the Production instance, navigate to:

All > System Update Sets > Update Sources

5-ServiceNow recommends limiting Update Sets to a maximum of 100 records to reduce the number of potential conflicts and make it easier to identify and review changes.

6-What are the steps for applying an update set to an instance? Retrieve, preview, commit

7- Where can you view a series of customizations? Update set

8-Navigate here to retrieve an update set: All > System Update Sets > Retrieved Update Sets

9- Navigate here to export an update set: All > System Update Sets > Local Update Sets

10- Select four true statements about scope:

- Determines which of the application's resources are available to other applications in the instance.
- Protects applications by identifying and restricting access to available artifacts and data.
- Prevents naming conflicts and allows the contextual development environment to determine what changes, if any, are permitted.
- Is assigned to an application when it is first created and cannot be changed.

11- Each update set is stored in the _____ table? Sys_update_set

12- Name the table where Update Sets write changes to? Sys_update_xml

13- To load data for an update set, navigate to: All > System Import Sets > Load Data

Task management

1- Select three types of tasks available via All > Service Desk > My Work:

- Requests
- Security Cases
- Visual Task Board Tasks

2- Select three items that Visual Task Boards allow you to do:

- Manage your tasks through a visual, drag-and-drop interface
- Identify process bottlenecks at a glance
- Track activity to view updates all in one place

3- What ensures that tasks do not fall by the wayside by notifying users when tasks have been untouched for a predefined period of time? Inactivity monitors

4- What is the sequence of conditions in an SLA definition? Start, pause, stop

5- Real-time editing allows you to edit records in real-time as well as see edits (indicated by a pulse icon) saved by other users using interfaces or devices such as (name four):

- Visual Task Boards
- Service Portal
- ServiceNow Mobile apps
- Apple Watch

6- Navigate here to create an assignment rule: System Policy > Rules > Assignment

7- Where can we create SLAs, OLAs and Underpinning Contracts? Service Level Management

8- Comments are visible by all users? True

9- Types of SLA (SLA, OLA, UC) are defined in which field? Type field

10- Navigate here to set configurable properties for the SLA Engine: Service Level Management > Properties > SLA Engine

11- Name four Elements of a Visual Task Board (VTB), from the list below.

- Title
- Cards
- Lanes
- Quick Panels

12- Select four types of tasks available via All > Service Desk > My Work:

- Change Requests
- Group Approvals
- Incidents
- Knowledge Base Submissions

[ServiceNow overview](#)

1- Navigate here to create a new relationship role: Configuration > Suggested Relationships

2- Where do users personalize their user interface? System settings

3- What are the three Now Platform interfaces?

- Now Platform User Interface
- ServiceNow Mobile Apps
- Service Portal

4- Which feature in ServiceNow helps improve Collaborative Efforts? User presence

Note: User presence is a Core UI feature that lets you see who is online when you are working in an instance.

5- Which plugin allows users to install multiple applications, application customizations or plugins at once? Continuous Integration and Continuous Delivery (CICD) Spokebatch install

6- The first time you log into a Next Experience instance, **an Onboarding Component**

is available to help you get acquainted with the unified navigation.

7- Which plugin needs to be activated in order to translate the content of a catalog item to multiple languages? Localization framework plugin

8- Name three of the Useful features headings:

- Start your day here
- Understand key data through visuals
- Expand your knowledge

9-Which of the three workflow types does the Now Platform provide?

- Employee
- Customer
- Information Technology (IT)

10-What is the Guided Setup completion indicator of an empty circle mean?

Task has not yet started

11-Which property prevents users from creating homepages or editing existing ones when set to true? com.glideapp.home.deprecate_homepages

12-The abbreviation HI stands for: hosted instance

13-By default, the History menu shows: The past **thirty** history entries

14- The applications delivered by ServiceNow are divided into four different workflows:

- IT Workflows
- Employee Workflows
- Customer Workflows
- Creator Workflows

15- How many Support Centers & Data Centers does service now have?

10 Support Centers & 10 Data Centers

16- Which new application replaces the mobile onboarding app, which was deprecated in San Diego release? Now Mobile App for HR Service Delivery

17-You cannot deactivate a plugin, once it has been activated. True

18- What are the three levels of super badges for Now Creators? Pro, Legend, Star

19- What are the people who want to get skills and earn badges and share their success in the NOW ecosystem called? Now creators

20- Navigate here to change the theme: Settings (gear icon) > Theme

21- How can an admin user flush the system cache? By typing cache.do in the navigation filter

22- Management of all ServiceNow hosted instances, including upgrades, is performed using: The Now Support (HI) (formerly known as HI Service Portal)

23- Restate three Visualization components displayed on Next Experience Unified Navigation:

- Information specific to the logged in user
- Reporting metrics
- A list of assigned tasks

24- Name four best practices when configuring Assignment Rules or Predictive Intelligence? (4)

- Setting an Assignment group and User based on Category and Subcategory.
- Setting a User based on Category and Subcategory.
- Setting an Assignment group and User based on the short description.
- Setting an Assignment group based on Category and Subcategory.

25-Boolean operators in global search must all be in caps? True

26-What is a one-stop shop for managing all your ServiceNow accomplishments?

Now profile

27- What is the difference between a UI Policy and a Data Policy? A Data Policy runs on both Client and Server side

[Service catalog](#)

1- Navigate here for Catalog Items (full path): Service catalog > Catalog Definitions > Maintain Items

2- What represents multiple related request items grouped together as one request?

Order guide

3- Which two items from below match the features of a Record Producer?

- Create an incident
- HR Case

4-What is the purpose of an Order Guide? To bundle similar items to be requested by the user

5- To create a new variable set, navigate to: All > Service Catalog > Catalog Variables > Variable Sets

6- Service Catalog Flow consists of: A fulfillment process with a set of actions and can send notifications to nominated users and groups

7- What gives you the ability to dynamically control the ordering options from user to user & be defined for groups that use a Catalog? Views

8- From the list below name three Service Catalog Management Roles:

- catalog_manager
- catalog_publisher
- catalog_admin

9- Which of the two items are not stages in Service Catalog fulfillment?

Closed, Deployment Fulfillment

10-Which three items from below match the features of ordering an item?

- Mobile phone
- Laptop
- Software request

11-Where would you go to create an order guide? Service catalog > catalog definition > order guides and click new

12-Under which circumstance is the delegated request experience not supported?

If two step checkout is enabled

14- Which two items from below match the features of requesting a service?

- Password reset
- New electrical drop

15- How is an HR Case fulfilled in the Service Catalog? Record producer

16- Sequence in a catalogue form is determined by? Order field on the variable form

17- Which of the following items does the Service Catalog include?

Catalog items, record producers, content items

Scripting

1-Business rules are real time: **false**

2- Select two true statements from below

- UI policies only enforces on data entered into a form or list (passing through the UI).
- Data Policies are applied to all data entered into the platform: form (UI), import sets, or web services.

3-What do client request + server response =? Round trip

4-Select two things from below that JellyScripting is used for?

- UI Macros
- Content Management System

Note: Jelly Scripting is used to create our own UI pages in ServiceNow.

Jelly is comprised of Java- and XML-based scripting and a transformation engine used to turn XML into executable code. The output is usually HTML and JavaScript code that is used by the browser to render UI elements on a page.

Jelly Scripting in ServiceNow is used in Application Modules :-

- UI Macros.
- UI Pages.

5-To turn on the Save button/UI Action that show “Save”, “Insert”, and “Insert and Stay” buttons on forms navigate to: All > System Properties > UI Properties

6- What is the shared scratchpad object? g_scratchpad

7- On the client script, which of the following variables cannot be used? gs.include()

Reporting

1-Name three types of charts categorized as Multidimensional reports in ServiceNow.

- Heatmap
- Bubble
- Multi-level pivot table

2-In ServiceNow Report Designer, what can be used to aggregate field values?

Standard deviation calculations

3-How do you get to the new dashboard that allows instance administrators to proactively monitor system health? Dashboards landing page

4- Which dashboard allows instance administrators to proactively monitor system health?

Application Insights Dashboard

5-Usually _____ is detected for a shorter amount of time than it takes to detect an anti-signal. In this case, the application shows a simple "_____" message. No notifications are sent and no action is necessary. **No signal**

6- Which ServiceNow dashboard shows the compliant security checks in a system?

PCI Configuration Controls score

7-When using the performance analytics application in the Now platform, what kind of KPI signals are used to make decisions that statistically support long term workflow stability? Anti-signals

8- The _____ lets you know that your workflow is under control. **Anti signal**

9-Which of the below items relates to a metric in ServiceNow reporting?

Measures and evaluates the effectiveness of IT Service Management process

10-What lets users share Widgets like Reports and Performance Analytics visualizations?

Responsive dashboards

11-Name five types of charts categorized as Time Series in ServiceNow.

- Area
- Column
- Line
- Spline
- Step Line

12-Name four types of charts categorized as Bars in ServiceNow.

- Bar
- Histogram
- Horizontal Bar
- Pareto

13-Name three types of charts categorized as Scores in ServiceNow.

- Dial
- Single Score
- Speedometer

14-Select two options that can be accessed from the Reporting module from list below.

- From the Column Header in a list view
- View/Run application module

15-Where do reports appear after you create them? Reports > View/Run

16-When KPI Signals does not detect abnormal variation for a significant amount of time, it generates **anti-signal**

17-What phase of the report designer lets you choose the fields needed in a list report?

Configure

18-Responsive Dashboards in the _____ _____ let users share widgets like Reports and Performance Analytics visualizations. **Content frame**

19- Name three types of charts categorized Pies and Donuts as in ServiceNow.

- Donut
- Pie
- Semi donut

20-What is an example of a column and bar chart? Pareto

Product

1- Name three, items from below about how Predictive Intelligence results in improved efficiency and quality and reduces costs:

- Reducing the amount of time spent resolving tasks
- Reducing the number of interactions required to resolve tasks
- Reducing the number of potential human errors that could occur while categorizing and assigning work

Notifications

1-Regarding inbound email actions, name three types of actions the system can take in response to a user's message.

- Make changes to a system table
- Send the user an email message in reply
- Override agent capacity for selected agents

2-How can administrators utilize the same content for different notification channels?

Provide common notification content

3-When a request is rejected, a notification is sent and sets the status to rejected. **True**

4-Name four ways to collaborate with team members on tasks?

- User presence
- Activity stream
- Connect chat
- Work notes

5-Users can set their notification subscription preferences by navigating to:

System Settings > Notification Preferences

6-You can verify your Notification was sent correctly using:

All > System Mailboxes > Outbound > Outbox

7-How to navigate to emails sent/received out/in from the Now platform Application navigator? System Logs > Emails

Lists & Filters

1-Which context menu allows you to export data from the list view?

List column context menu

2-How can you modify field data in a list view without opening the record? List editor

3-What are the two list versions? v2, v3

4-Which role is required to change list layout? Personalize_list

5-What context menu is available for each value in a list? List field context menu

6-Select three items that List Title menu consists of:

- Show
- Refresh List
- Create Favorite

7-Where do we go in Next Experience UI to create a new view?

Right click any column header and select Configure > List Layout

8-What displays actions like quick reports, configuring lists, and exporting data?

Column Context Menu

9-Where to navigate to see a list of all configuration items? Configuration > Base Items > All

10-How to you save a filter for a list? Give it a name, Set visibility, Save

11-What appears to the right of the gear if you've personalized a list? Green dot

12-Select three items that List Title menu consists of:

- View
- Filters
- Group By

Knowledge Management

1-What is a button that triggers a search for similar knowledge articles already existing?

search for duplicates

2-Where do you click to import Microsoft Word documents directly into a KB?

Import articles

3-Navigate here to review flagged articles: Knowledge > Articles > All Flagged

4-As it relates to Knowledge Management, KCS is an abbreviation for: Knowledge Centered Service

5-After this date the KA will no longer appear in Knowledge Searches or the published KB.
valid to

Integrations

1-Name three most common processes required for integration:

- CMDB
- User Administration
- Single Sign-On

2-Name three most common processes required for integration:

- Incident Management
- Problem Management
- Change Management

3-Select two standard integrations for ServiceNow:

- Monitoring
- Systems Management

4- Select three standard integrations for ServiceNow:

- Login (Single Sign-On)
- LDAP
- Communications

Import sets

1-The conversion of data from an import set table to its target table according to the _____ in the transform map. **Rules defined**

2-Which two roles are required to manage import sets?

- import_admin
- admin

3-Regarding Import Sets, if there are any discrepancies in terms of how fields were automatically matched, these can easily be corrected using the **Mapping assist utility**.

4-What happens when more than one record in the target table matches the coalesce options?

Only the first matching record in the target table is updated with values from the import set

5-Tables can be viewed and manipulated through which three interfaces?

- Record List View
- Tables Module
- Schema Map

6-Name and Source table are set based on the label which was assigned to the **import set**

7-The imported **file label** is used to name the import set table the data will be loaded into.

8-To create a Transform Map, navigate to: All > System Import Sets > Create Transform Map

9-In what type of coalesce are source scripts defined to match the sys_id of the target field?

Using Conditional coalesce

10-How does automating in a Transform Map work?

It takes the names of import set table heading and matches it against the existing column field name.

11-To configure data policies, navigate to: All > System Policy > Rules > Data Policies

12-With the **Mapping assist utility** it is possible to map a single source field (field on an Import Set table) to multiple destination fields (fields on a target table).

13-Can we coalesce multiple fields? **True**

14-To clean up the Import Set Table data, navigate to: All > System Import Sets > Import Set Tables > Cleanup

Forms and templates

1-Which two of the options below, Creates a new record and keeps the form open?

- Copy Incident
- Insert & Stay

2-Select the true statement from below. The most important things to remember about the Notes tab are: Activity is a read-only record entry made when the record is created or updated.

3-Which fields can be configured in reporting to perform arithmetic, coalesce, concatenation and length? Function fields

4-Which element is used to display information that is not a field in the record? Formatter

5-What simplifies input by populating some form fields automatically? Form template

6-Which two roles can configure forms using Form Designer?

- admin
- personalize_form

7-Which one is used to group related fields together? Sections

Flow designer

1-Which of the following three options are frequently used actions contained in the spoke ServiceNow Core:

- Ask for Approval
- Create Record
- Delete Record

2-Select two items from below that you should not use Flow Designer for:

- When a ServiceNow Instance is running Jakarta or prior
- When existing logic already developed using the ServiceNow workflow editor

3-What is activated when their parent application is activated? Spokes

4-Which of the following four application-based options for a trigger?

- SLA Task
- Inbound email
- MetricBase
- Service Catalog

5-Select the four items that are sections and functions of the Process Automation Designer canvas:

- Main header
- Activity design space
- Show/Hide Properties
- Add process activity

6-Which of the following three options are time-based options for a trigger?

- Date-based
- Daily
- Weekly
- Monthly
- Run once
- repeat

7-When using flow designer which template can be created and saved for use as outputs in steps or actions? Complex objects

8-Name three options allowing you start a flow from a script or API call from the same instance?

- Use a subflow
- Code snippet
- Flow Designer API

9-How often are flow designer related entries deleted from the variables table if they haven't been used in over a year? Monthly

10-Select the option that is not a key benefit of Process Automation Designer:

Processes documented in the Process Automation Designer, are called Automated Designs.

11-Which of the following two options are not time-based options for a trigger?

- Repeat Twice
- Do Not Repeat

12-Which of the following three options are not frequently used actions contained in the spoke ServiceNow Core:

- Create a Table
- Create a User
- Create a Group

13-Which application helps developers working with IoT-based applications that monitor or act on large amounts of data? MetricBase

14-When designing a flow, select three you can use the results of an action as inputs of other? Action, Flow, subflow

15-Name three Flow Designer roles from list below:

- flow_operator
- action_designer
- flow_designer

16-Starter spokes are included with the subscriptions.

17-Within Flow Designer, the data pill name indicates the: Sequence in the flow and its data type

18-What are the workflow activities?

Waiting for approval, fulfillment, delivery, completed

19-How can you modify data pill values without scripting in ServiceNow's Flow Designer?

Use transform functions

20-Launch Flow Designer by navigating to: All > Process Automation > Flow Designer

21-Which of the following three options are application-based options for a trigger?

- Created
- Updated
- Created or Updated

22-When the workflow action is canceled in flow designer, which property from below can be used to set a timeout value that overrides the default timeout?

com.glide.cs.fdih.interactive.timeout

Events

1-Where would you go to see if an admin impersonated another user?

In the Event logs and look for impersonation.start and impersonation.end in the name field

2-Navigate here to display version, patch, and hotfix your instance is running.

All > System Diagnostics > Stats > Stats

3-For events, navigate to _____ module to create a new record.

All > System Policy > Events > Registry

4-What are the log records that indicate something notable has occurred in the system?

Events

5-In order to be used, an event record must be _____? Registered

6-Where are event logs stored? System Policy > Events > Event log

7-Navigate here to aid in performance evaluation: All > System Policy > Events > Registry

8-Related to events, the system uses business rules_____ to monitor for system conditions.

9-What does the Event registry contain? Definition of events

Development

1-Navigate here to set the prefix or number of digits for a table's record numbers

System Definition > Number Maintenance

2-What are the three ServiceNow Mobile Apps?

- ServiceNow Onboarding (now Mobile App for HR Service Delivery)
- ServiceNow Agent
- Now Mobile

3-What walks you through the initial configuration of your instance? Guided setup

4-What is true about deleting tables?

Only tables beginning with "u_" can be permanently deleted

5-How do you request a clone from Production to Sub-production instance?

In the system create a clone request by going to System Clone > Request Clone

6-Select three UI Actions from below: form button, context menu, related links

7-Which of the following is a way to apply approval in ServiceNow?

- Approval Rules
- Workflow
- Process Guides

8-What are the software components that provide additional optional features and functionalities? Plugins

9-Where to navigate to view the tables not included in the cloning process.
System Clone > Clone Definition > Exclude Tables

10-What are Developer permissions that grant access to web service and REST APIs and data sources? Integrations

11-Where can you set to limit the paging control options available to users?
glide.ui.per_page

12-The "HI" in HI Service Portal is an abbreviation for what? Hosted instance

Data Schema

1-Where module do you navigate to for viewing the field settings and attributes for a table.

Or To generate a schema map, navigate to:

All > System Definition > Tables & Columns

2-Using the **dictionary override** feature provides the ability to define a field on a child table differently from the field on the parent table.

3-Which of the following describes a one-to-many relationship:

Within a table, a field can hold a reference to a record on another table.

4-Dictionary in ServiceNow contains: Details about tables and their fields in the system

5-Navigate here to access the system dictionary to modify table and field attributes.

All > System Definition > Dictionary

6-Which of the following describes Database Views:

Two tables can be joined virtually to allow for reporting on data that might be stored in more than one table.

7-Client Script on the Task table will be applied to Problem table as well: **Only if inherit is true**

8-What identifies available fields that have related tables you can dot-walk to?

Green with a plus sign

9-Navigate here to view the Transaction Log: System Logs > Transactions

10-Select three features of a Dictionary Override:

- Overriding the default values
- Field dependencies
- Read-only status of a field

11-If the system is going to be upgraded, what will be exempt from the upgrade?

Any record that has been altered from the base by the customer

12-The Schema Map is available to users with which two roles from below?

- personalize_dictionary
- admin

13-Where would you go to start an import set? System Import Sets > Load Data

14-To add a different label for an extended table, navigate to:

All > System Definition > Language File

15-Within a Schema Map, name the window on the far right of the screen providing a summary of all the tables presented and their relationships. **Tables**

16-Beyond admin, which role is required to create a Document ID field?

personalize_dictionary

17-Where can you navigate for modifying an application menu name: All > System Definition > Application Menus

18-What is called to gather info from a series of tables by expanding referenced fields?

dot-walking

Note: Dot Walk in ServiceNow is a feature that helps users move through related records quickly. Dot-walking lets you access fields and data without having to use complex queries or extra scripts. This makes workflows easier and more efficient. In ServiceNow, dot walking uses dot notation to access fields in related records.

CMDB

1-What is the graphical interface to visualize CIs and their relationships called?

Dependency views

2-Select three facts below about; What is CSDM?

- Standard terms and definitions
- Best Practice for CMDB Data Modeling and Data Management
- Out of the box CMDB core tables

3-Toggle between **the CI Health Dashboard** view and the form view using the options in the form title bar.

4-**service mapping** discovers and models the relationships and dependencies between discovered CIs and automatically populates this information into the CMDB.

5-**CMDB** help monitor and discover what system components are needed for effective and efficient business processes and IT service management.

6-To review or create new Suggested Relationships navigate to:
ALL > Configuration > Relationships > Suggested Relationships

7-Name three CMDB components from the list below.

- Dependency Views
- Business Services
- Processes

8-Select two facts below about; What is CSDM?

- Guidance on service modeling
- Recommended mappings

9-Navigate here to view a Dependency View Map: Dependency Views > View Map

10-The "MID" in MID server is an abbreviation for what?

- Management
- Instrumentation
- Discovery

Branding

1-Restate four branding features that can be configured.

- Banner image text and colors
- System date / Time formatting
- Browser tab title
- Navigator background and text colors

Automated Test Framework

1-Within ATF, **the assert type** field specifies the conditions that must be met for a test to pass.

2-To grant or remove delegated development, navigate to: All > System Applications > My Company Applications

3-A _____ runner is a browser tab that runs client-side test steps within a Now Platform user interface. _____ runners require a browser tab to function.

Client test

- 4-Within ATF, Test designers add test steps to tests to verify **functionality**.
- 5-Within ATF, the test step always specifies: The order in which it runs in the test
- 6-With ATF **A step result** stores the output of a test step run.
- 7-Each **Test Step** is a record in the **Test Step [sys_atf_step]** table that specifies a test action, the step configuration, and an execution order.

Application/Access Control

1-How would a user go about preventing their instance from communicating with untrusted domains and email addresses? System address filters

2-Which certificate-based authentication methods can be enabled so that users can log into the Service Portal ? Select 2 options?

- Common Access Card (CAC)
- Personal Identity Verification (PIV)

3-If a user does not meet the permissions of the first matching rule, the system evaluates the permissions of the next matching access control rule as specified by the **Access control processing order**

4-Select four ServiceNow operation examples:

- execute: user cannot execute scripts on a record or UI page.
- edit_ci_relations: user cannot define relationships between Configuration Item [cmdb_ci] tables.
- save_as_template: controls the field that should be saved when a template is created.
- report_control: user cannot control reports on the object.
- personalize_choices: user cannot right-click a choice list field and select Configure Choices. (from another question: it is personalize_choices not personalize_list , take care)

5-The **None** Access Control grants all rows and all fields to both the table_admin and table_user roles.

6-Navigate here, to add a role and its permissions **All > User Administration > Roles** and to manage roles that are used to determine which features of ServiceNow users can access.

7-Name three security modules on the All menu typically used by the System Administrator:

- System Security > High Security Settings
- System Properties > Security
- System Security > Access Control (ACL)

8-Roles are stored as a record which table? sys_user_role table

9-You can view assignment rules by navigating to: All > System Policy > Rules > Assignment

10-Name three user authentication methods in ServiceNow? SSO – LDAP -local database

11-Assignment lookup rules are another type of assignment rule. These rules only apply to **incident** records. It can be found at **All > System Policy > Rules > Assignment Lookup Rules**

12-When a custom table is created, the system creates four access control rules by default:

Create, delete, read, write

13-What is contextual security?

Its a system security type, which Controls every level in the ServiceNow object hierarchy. You can control specific tables and fields.

14-Name three things from below describing User Authentication/Login? Users, groups, roles

15-What reduces the amount of rules required to control access? Wildcard ACL Rules

16-Which of the following two statements are true about Access Controls?

- When writing an ACL that mostly grants access, use only None.
- When writing an ACL that mostly denies access, use None and .*

17-A Data policy is used to enforce **consistency**

18-Select the correct order of ACL Evaluation from the below.

Table, Parent Table, Any table(wildcard)

19-To create a role, navigate: to All > System Security > Users and Groups > Roles

20-Select two facts about Database Access, access to tables, records, and fields is controlled via **Globally defined system properties** as well as table and **Field level Access Controls (deny access is the default behavior)**

[Agent Workspace](#)

1-Which tool allows users to reuse content by creating, editing and publishing knowledge blocks? Agent workspace

Extra Notes

Schema map -> tables

Dependency view -> CIs

CI class manager > advanced version of schema map where we can edit, schema map is read only – create dependencies between CIs

-Use guided setup to step through the initial configuration of any product or application that provides a Guided Setup module. Guided setup assists you with planning the roll-out of the product

- order guide to assist a customer ordering a set of items and to help them see relationship (service catalog)

What is Captured in an Update Set?

 Process Records	 Data
• Business Rules • Client Scripts • UI Policies • Fields • Forms and Form Sections • Report Definitions • Tables • Views • List Configuration • Roles • Flows/Published Workflows	• New Data Records • Modified Data Records • Tasks • Modified CIs • New Users and Groups • Schedules • Scheduled Jobs • Dashboards*

except please notice
the very last bullet

JavaScript in ServiceNow: JavaScript APIs

Provide classes and methods that can be used in scripts to define the functionality of the platform

Client-side Classes

GlideAjax

GlideForm

GlideList

GlideRecord

GlideUser

spModal

Server-side Classes

GlideAggregate

GlideDateTime

GlideElement

GlideRecord

GlideQuery

GlideSystem

JSON

Workflow

Application need:	Client Script	UI Policy
Execute on form load	X	X
Execute on form save/submit/update	X	
Execute on form field value change	X	X
Have access to a field's prior value	X	
Execute on list field value change(s)	X	
Execute after Client Scripts		X
Require scripting	X	

So that's something else to keep in mind and consider.

Configuration

Most of what administrators do in a ServiceNow instance is **configuration**. This primarily consists of things that can be **done without code**.

Examples:

- Update list of categories on a form
- Add baseline fields to form
- Configure list views
- Create a service catalog and catalog items
- Extend a table for a new hardware class

Customization

Customization is done when a customer requires additional functionality that does not exist in the platform, and they want to add features.

Examples:

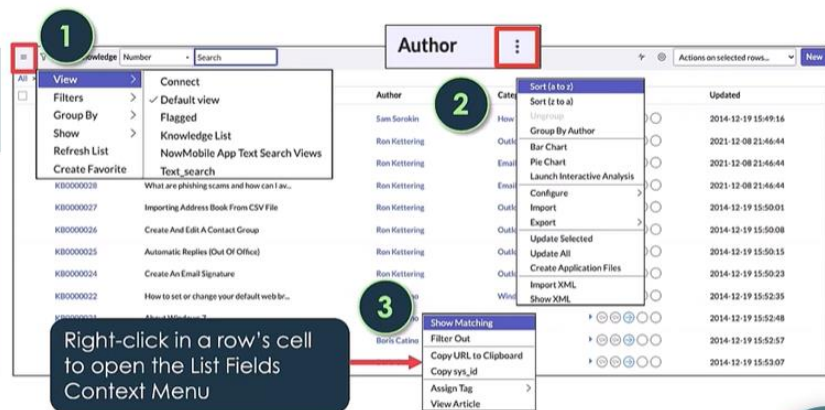

- Enhance a portal widget to display lists with complex access controls
- Add a table for special billing requirements

Fundamentals in which you'd learn

Context Menus in the Classic List

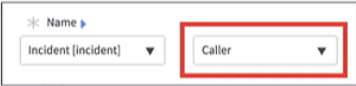

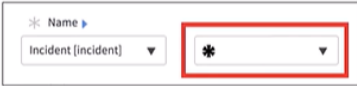

Context menus provide different levels of controls for a given list view

1. List Controls menu
2. Column Options menu
3. List Fields (Right-click) Context Menu

is far from the only thing that we could do

Context menus can be accessed by clicking the menu icon or by right-clicking

table.--None--	table.field	table.*
		
No specific field selected - this rule applies to the whole table including all its records	This rule applies to only one field on a record and in this case, the Caller field on an incident record	Wildcard – this rule applies to every field on a record without a table.field rule

Example: Think of a house. **house.--None--** is the *whole* house. **house.field** is a specific *room* in the house. **house.*** is all the *other rooms* not defined with a house.field rule.

CSDM: What it is, What is it NOT, and What's in it for you

		
What it is: - Standard terms and definitions - Best Practice for CMDB Data Modeling and Data Management - Out of the box CMDB core tables - Guidance on service modeling - Recommended mappings	What it is NOT: - Not a process or implementation guide for ITSM, SPM, APM, EM, or Other products - Not a set of reports - Not code to install - Not a SKU or product to buy - Not an automatic fix for past implementations it helps keep your CMDB journey on track	What's in it for you: - Consistently modeled service offerings enable: - Better understanding of service costs - More accurate reporting - Consistent use of service across applications; reduction of duplication and confusion - Less overhead when maintaining services - Some products have a dependency on CSDM tables being populated
